Kata Pengantar

Alhamdulillah rabbil ‘ālamīn, puji dan syukur kami panjatkan ke hadirat Allah Subhānahu wa Ta‘ālā atas limpahan rahmat dan karunia-Nya, sehingga buku ALMANAK OIF 2026 M ini dapat diselesaikan dan diterbitkan sebagaimana direncanakan. Kehadiran almanak ini merupakan bagian dari inovasi berkelanjutan yang diinisiasi oleh Tim Observatorium Ilmu Falak Universitas Muhammadiyah Sumatera Utara (OIF UMSU), yang setiap tahun berkomitmen untuk menyajikan informasi astronomi aplikatif bagi masyarakat.

Secara umum, ALMANAK OIF 2026 M memuat sejumlah informasi penting dan aktual seputar ilmu falak, antara lain: profil singkat OIF UMSU, data ijtimak dan posisi hilal untuk tahun 1447 dan 1448 Hijriah, waktu-waktu salat sepanjang tahun 2026, momen-momen ibadah tahunan (seperti awal Ramadhan, Idul Fitri, dan Idul Adha), arah kiblat, peristiwa gerhana, serta berbagai fenomena astronomi yang dapat diamati selama tahun 2026. Seluruh data ini disusun berdasarkan kaidah hisab kontemporer yang terverifikasi, dengan tetap mengedepankan akurasi dan keterbacaan untuk khalayak luas.

Penyusunan almanak ini bertujuan untuk menjadi sumber informasi falakiah yang dapat diandalkan oleh masyarakat, khususnya di wilayah Sumatera Utara, baik

untuk keperluan ibadah, pendidikan, penelitian, maupun pengembangan ilmu pengetahuan. Selain itu, publikasi ini merupakan bagian dari tanggung jawab ilmiah dan moral OIF UMSU sebagai satu-satunya lembaga astronomi yang aktif di Sumatera Utara, yang terus berupaya mendekatkan ilmu falak kepada masyarakat secara praktis dan kontekstual.

Akhir kata, kami mengucapkan terima kasih kepada seluruh pihak yang telah berkontribusi dalam proses penyusunan dan penerbitan almanak ini. Kami menyadari bahwa kesempurnaan adalah milik Allah semata. Oleh karena itu, segala bentuk masukan dan kritik konstruktif sangat kami harapkan demi perbaikan almanak ini di masa mendatang. Semoga ALMANAK OIF 2026 M ini memberikan manfaat yang luas bagi umat dan menjadi amal jariyah bagi semua yang terlibat di dalamnya.

Tim Penyusun

Sekilas Tentang OIF UMSU

Observatorium Ilmu Falak Universitas Muhammadiyah Sumatera Utara (disingkat OIF UMSU) adalah lembaga di UMSU yang bergerak di bidang ilmu falak (astronomi). OIF didirikan tahun 2014 berdasarkan SK Rektor UMSU (Dr. Agussani, MAP) nomor 1060/KEP/IL.3-AU/UMSU/D/2014, dan diresmikan oleh Ketua MTT PP Muhammadiyah (Prof. Dr. H. Syamsul Anwar, MA). Selanjutnya, pada Konvensi Nasional Indonesia Berkemajuan (KNIB) di Yogyakarta, 23 Mei 2016 M, OIF kembali diresmikan oleh Presiden RI (Joko Widodo) yang ditandai dengan penandatanganan prasasti.

Aktivitas OIF adalah penelitian, edukasi, dan khidmat kepada masyarakat dalam bidang ilmu falak (Astronomi Islam). OIF memiliki visi menjadi pusat pengkaderan, penelitian, pemikiran dan pengkajian Ilmu

Falak yang memadukan khazanah Islam dan sains modern dan misi menyelenggarakan program pelatihan, pengkajian, dan penyuluhan Ilmu Falak di lingkungan kampus dan di lingkungan masyarakat. Sementara itu, motto OIF adalah “*memotret semesta demi iman dan peradaban*”. Atas spirit, visi, misi, dan motto inilah OIF bergerak dan berkemajuan.

BAB I. Pendahuluan

Ilmu falak atau astronomi Islam merupakan salah satu cabang keilmuan klasik yang terus relevan hingga hari ini. Dalam praktiknya, ilmu ini tidak hanya membahas benda-benda langit secara umum, tetapi secara khusus digunakan untuk kepentingan ibadah umat Islam, seperti menentukan waktu salat, arah kiblat, awal bulan kamariah, serta mengamati dan menghitung peristiwa langit seperti gerhana. Di tengah kemajuan teknologi, dua pendekatan utama dalam ilmu falak yaitu hisab (perhitungan) dan rukyat (pengamatan) semakin berkembang, saling menguatkan, dan digunakan secara bersamaan dalam berbagai kebutuhan keagamaan dan sosial masyarakat.

Metode hisab menggunakan data-data astronomi dan rumus matematika untuk menghitung posisi benda langit secara presisi. Dengan bantuan komputer dan perangkat lunak modern, hisab memungkinkan kita untuk mengetahui waktu terbit matahari, posisi bulan, hingga kapan dan di mana gerhana akan terjadi. Sementara itu, metode rukyat dilakukan dengan cara observasi langsung di lapangan, seperti melihat hilal (bulan sabit muda) untuk menentukan awal bulan

Hijriah. Dalam tradisi keislaman, rukyat memiliki nilai historis dan spiritual yang tinggi, karena meniru langsung apa yang dilakukan pada masa Nabi Muhammad SAW. Oleh karena itu, integrasi antara hisab dan rukyat menjadi penting agar umat Islam dapat mengamalkan ibadah dengan dasar yang kuat secara keilmuan dan sesuai tuntunan syariat.

Salah satu penerapan paling penting dari ilmu hisab rukyat adalah dalam penentuan waktu salat. Setiap salat memiliki kriteria astronomis yang khas, seperti ketika matahari tergelincir untuk salat Zuhur, atau ketika langit mulai gelap untuk salat Magrib dan Isya. Data tersebut dihitung berdasarkan posisi matahari terhadap horizon bumi. Dengan pemahaman ini, umat Islam di berbagai penjuru dunia dapat menjalankan salat tepat waktu, sesuai dengan pergerakan matahari yang memang menjadi acuan utama dalam penentuan waktu salat. Penyusunan jadwal salat tahunan yang terdapat dalam almanak ini merupakan hasil dari proses hisab yang cermat, mempertimbangkan parameter lokal seperti lintang, bujur, dan ketinggian tempat.

Selain waktu salat, penentuan arah kiblat juga menjadi bagian tak terpisahkan dari kajian ilmu falak. Setiap Muslim yang akan mendirikan salat diwajibkan untuk menghadap ke Ka'bah di Makkah.

Dalam praktiknya, arah kiblat dihitung berdasarkan koordinat geografis tempat berdiri seseorang terhadap koordinat Ka'bah, menggunakan rumus-rumus perhitungan segitiga bola dalam astronomi. Di zaman modern ini, arah kiblat dapat dipastikan dengan akurat menggunakan peta digital, kompas kiblat, atau momen alami seperti Rashdul Qiblat, yaitu saat matahari tepat berada di atas Ka'bah sehingga bayangan benda tegak lurus menunjukkan arah kiblat secara alami. Informasi seperti ini menjadi sangat berguna bagi masyarakat umum maupun lembaga keagamaan yang hendak memastikan arah kiblat dengan tepat.

Lebih jauh lagi, ilmu falak juga berperan dalam menentukan awal bulan kamariyah seperti Ramadhan, Syawal, dan Zulhijjah yang sangat ditunggu-tunggu oleh umat Islam. Penentuannya tidak bisa dilakukan secara sembarangan, melainkan harus berdasarkan perhitungan ijtimak (konjungsi bulan-matahari) dan dilanjutkan dengan analisis visibilitas hilal—apakah hilal dapat dilihat secara langsung di suatu lokasi atau tidak. Dalam konteks ini, hisab memberikan prediksi yang akurat kapan dan di mana hilal mungkin dapat dirukyat, sehingga rukyat bisa dilakukan dengan efisien dan tepat sasaran. Selain itu, ilmu falak juga mampu memprediksi peristiwa gerhana matahari dan bulan

jauh-jauh hari sebelumnya. Informasi ini tidak hanya penting secara keagamaan, seperti pelaksanaan salat gerhana, tetapi juga memperkaya wawasan masyarakat tentang dinamika alam semesta yang sangat menakjubkan.

Dengan memahami berbagai aspek yang dibahas melalui pendekatan hisab dan rukyat, kita dapat melihat betapa luas dan bermanfaatnya ilmu falak dalam kehidupan sehari-hari. Buku Almanak OIF 2024 ini menyajikan informasi tersebut secara praktis dan sistematis, agar dapat dimanfaatkan oleh masyarakat umum, pendidik, peneliti, hingga para pengambil kebijakan di bidang keagamaan. Harapannya, almanak ini bukan hanya menjadi pedoman ibadah tahunan, tetapi juga menjadi sarana edukasi untuk mendekatkan masyarakat kepada langit—sebagai ciptaan Allah yang sarat makna dan perenungan.

A. Hisab Rukyat

Bagian ini menjelaskan prinsip dan metode yang digunakan dalam perhitungan (hisab) dan pengamatan (rukya) dalam konteks ilmu falak. Penjabaran ini bertujuan memberikan pemahaman kepada pembaca mengenai dasar ilmiah di balik data-data falakiah yang disajikan dalam almanak, serta bagaimana penerapannya dalam kehidupan sehari-hari, khususnya untuk keperluan ibadah umat Islam.

HISAB adalah perhitungan secara matematis dan astronomis untuk menentukan posisi bulan dalam menentukan dimulainya awal bulan pada kalender hijriyah. Secara harfiah Hisab berarti perhitungan. Dalam dunia Islam istilah hisab sering digunakan dalam ilmu falak (astronomi) untuk memperkirakan posisi matahari dan bulan terhadap bumi.

Posisi matahari menjadi penting karena menjadi patokan umat Islam dalam menentukan masuknya waktu shalat. Sementara posisi bulan diperkirakan untuk mengetahui terjadinya hilal sebagai penanda masuknya periode bulan baru dalam kalender hijriyah. Hal ini penting terutama untuk menentukan awal Ramadhan saat memulai berpuasa, awal Syawal ('Idul Fithri), serta awal Dzul Hijjah untuk menentukan saat jama'ah haji wuquf di 'Arafah (9 Dzul Hijjah) dan 'Idul Adha (10 Dzul Hijjah).

Di dalam al Qur'an Surat Yunus (10) ayat 5 disebutkan bahwa Tuhan sengaja menjadikan matahari dan bulan sebagai alat menghitung tahun dan perhitungan lainnya.

هُوَ الَّذِي جَعَلَ الشَّمْسَ ضِيَاءً وَالْقَمَرَ نُورًا وَقَدَرَهُ مَنَازِلَ لِتَعْلَمُوا عَدَدَ السِّنِينَ وَالْحِسَابَ مَا خَلَقَ اللَّهُ ذَلِكَ إِلَّا بِالْحَقِّ يُفَصِّلُ الْآيَاتِ لِقَوْمٍ يَعْلَمُونَ

Artinya: Dia-lah yang menjadikan matahari bersinar dan Bulan bercahaya dan ditetapkan-Nya bagi Bulan itu manzilah-manzilah, supaya kamu mengetahui bilangan tahun dan perhitungan (waktu). Allah tidak menciptakan yang demikian itu melainkan dengan hak. Dia menjelaskan tanda-tanda (kebesaran-Nya) kepada orang-orang yang mengetahui. (QS. Yunus : 5)

Juga dalam Surat Ar Rahmaan (55) ayat 5 menyebutkan bahwa matahari dan bulan beredar menurut perhitungan.

الشَّمْسُ وَالْقَمَرُ بِحُسْبَانٍ

Artinya: Matahari dan Bulan beredar menurut perhitungan (QS. Ar Rahmaan : 5)

Karena ibadah-ibadah dalam Islam terkait langsung dengan benda-benda langit (khususnya matahari dan bulan), maka sejak awal peradaban Islam menaruh perhatian besar terhadap astronomi. Astronom muslim yang telah mengembangkan metode Hisab modern adalah Al Biruni (973 – 1048 M), Ibnu Tariq, Al Khawarizmi , Al Batani Dan Habasah.

Bahkan dewasa ini, metode hisab telah menggunakan komputer dengan tingkat presisi dan akurasi yang tinggi. Berbagai perangkat lunak (software) yang praktis juga telah ada.

RUKYAT adalah aktivitas mengamati visibilitas hilal, yakni penampakan bulan tsabit yang nampak pertama kali setelah terjadinya Ijtima' (konjungsi), rukyat dapat dilakukan dengan mata telanjang atau dengan alat bantu optik seperti teleskop.

Rukyat dilakukan setelah matahari terbenam. Hilal hanya tampak setelah matahari terbenam (maqrib), karena intensitas cahaya hilal sangat redup dibandingkan dengan cahaya matahari, serta ukurannya sangat tipis.

Apabila hilal terlihat, maka pada petang (maqrib) waktu setempat telah memasuki bulan (kalender) baru hijriyah. Apabila hilal tidak terlihat maka awal bulan ditetapkan mulai maqrib hari berikutnya.

Namun demikian dari pengalaman selama ini tidak selalu hilal dapat terlihat. Dalam teori manakala selang waktu antara Ijtima' dengan terbenamnya matahari terlalu pendek, maka secara ilmiah hilal mustahil terlihat, karena iluminasi cahaya bulan masih terlalu suram di bandingkan "cahaya langit" sekitarnya.

Kriteria DANJON (1932 – 1936) menyebutkan bahwa hilal dapat terlihat tanpa alat bantu jika minimal jarak sudut (arc of light) antara bulaan matahari sebesar 7 derajat.

Muktamar Ke-47 Muhammadiyah tahun 1436 H/2015 M di Makassar memutuskan akomodasi KHGT dengan amar putusan sebagai berikut: Berdasarkan Al-Qur'an, umat Islam adalah ummah wahidah (umat yang satu). Pengalaman sejarah dan pembentukan negara bangsalah yang menyebabkan umat Islam terbagi ke dalam beberapa negara. Selain terbagi dalam berbagai

negara, dalam satu negara pun umat Islam masih terbagi ke dalam kelompok, baik karena perbedaan paham keagamaan, organisasi maupun budaya. Pembagian negara dan perbedaan golongan itu di satu sisi merupakan rahmat, namun di sisi yang lain juga merupakan tantangan untuk mewujudkan kesatuan umat.

Muhammadiyah melakukan akomodasi KHGT dalam rangka mengamalkan al-dīn al-qayyim supaya umat memiliki keadaan baik dalam berkalender. Keadaan baik itu adalah memberikan kepastian dan dapat dijadikan kalender transaksi. Hal ini sudah barang tentu dengan penyesuaian. Jika dahulu dalam kalender agama lurus itu, ada penerimaan perhitungan satu tahun terdiri atas 12 bulan sebagai konvensi internasional, sekarang penerimaan kalender yang baik menurut standar internasional adalah universal (1 hari 1 tanggal di seluruh dunia, pasti dan berlangsung lama) dan ada penerimaan 4 bulan suci yang menjadi konvensi di wilayah Arab pada zaman Al-Qur'an turun.

Contoh Perhitungan Hisab Awal Bulan

(1 Syawal 1429 H) untuk Kota Yogyakarta

($\varphi = -07^{\circ} 48'$ LS dan $\lambda = 110^{\circ} 21'$ BT, Ketinggian 90 m)

1. Menghitung Ijtimak

1) Konversi Tanggal Hijriah ke Tanggal Masehi

29 Ramadan 1429 H = telah lewat 1428 tahun + 8 bulan + 29 hari

1428 : 30 = 47 daur + 18 tahun

$$47 \times 10361 \text{ hari} = 499657 \text{ hari}$$

$$18 \text{ tahun} = 7 \text{ tahun kabisat} \times 355 \text{ hari} = 2485 \text{ hari}$$

$$11 \text{ tahun basitat} \times 354 \text{ hari} = 3894 \text{ hari}$$

$$8 \text{ bulan} = 4 \text{ bulan ganjil} = 4 \times 30 \text{ hari} = 120 \text{ hari}$$

$$4 \text{ bulan genap} = 4 \times 29 \text{ hari} = 116 \text{ hari}$$

$$\underline{29 \text{ hari}} = \underline{29 \text{ hari}} +$$

$$\text{Jumlah hari yang telah dilewati} = 506301 \text{ hari}$$

sejak 01-01-01 H

$$\underline{\text{Selisih hari Masehi dan Hijriah}} = \underline{227015 \text{ hari}} +$$

$$\text{Jumlah hari dalam tahun Masehi} = 733316 \text{ hari}$$

sebelum koreksi

$$\underline{\text{Koreksi Paus Gregorius XIII}} \quad \underline{13 \text{ hari}} +$$

$$\text{Jumlah hari yang telah dilewati} = 733329 \text{ hari dalam tahun Masehi}$$

$$733329 : 1461 = 501 \text{ daur} + 1368 \text{ hari}$$

$$501 \times 4 \text{ tahun} = 2004 \text{ tahun}$$

$$1368 : 365 \text{ hari} = \underline{3 \text{ tahun} + 273 \text{ hari}}$$

$$= 2007 \text{ tahun} + 273 \text{ hari}$$

$$273 \text{ hari} (31+29 +31+30+31+ 30+31+31) = 8 \text{ bulan} + 29 \text{ hari}$$

$$2007 \text{ tahun} + 8 \text{ bulan} + 29 \text{ hari} = 29 \text{ September } 2008 \text{ M}$$

Menentukan hari = $733316 : 7 = 104759$ sisa 3 hari =
Senin

2) Mencari Fraction Illumination Bulan (FIB) terkecil:

FIB terkecil = 0.001137 (Senin 29-09-2008 pk 08:00 WU/ Senin 15:00 WIB)

3) Kecepatan gerak matahari per jam (B'')

ELM pukul 09:00 WU = $186^{\circ} 35' 26''$

ELM pukul 08:00 WU = $186^{\circ} 32' 59'' -$

$$B'' = \quad 2' 27''$$

4) Kecepatan gerak Bulan per jam (B')

ALB pukul 09:00 WU = $186^{\circ} 58' 21''$

ALB pukul 08:00 WU = $186^{\circ} 26' 01'' -$

$$B' = \quad 32' 20''$$

5) Selisih kecepatan gerak B ulan dan matahari per jam (B'-B'')

$$B'-B'' = 32' 19'' - 2' 28'' = 29' 51''$$

6) Selisih ELM dan ALB pada jam sebelum terjadi ijtimak

$$ELM - ALB = 186^{\circ} 32' 59'' - 186^{\circ} 26' 01'' = 0^{\circ} 6' 58''$$

7) Titik Ijtimak

Titik ijtimak = (ELM–ALB) : (B' – B'') = 0° 6' 58" : 29' 53" = 13m 59,26d.

8) Ijtimak

Ijtimak = FIB + titik ijtimak = 08:00 WU + 13m 59,26d = 08:13:59,26 WU (29-09-2008) = 15:13:59.26 WIB.

9) Kesimpulan

Ijtimak jelang Syawal 1429 H terjadi Senin 29-09-2008 pukul 15:13:59,26 WIB.

2. Menghitung Saat Terbenamnya Matahari (untuk Kota Yogyakarta)

- 1) Koordinat kota Yogyakarta: $\phi = -07^{\circ} 48'$; $\lambda = 110^{\circ} 21'$ BT; ketinggian 90 m
- 2) Perkiraan terbenamnya matahari Senin 29-09-2008 pukul 18:00 WIB (11:00 WU)
- 3) a . Delinasi matahari pada waktu perkiraan gurub (δ_m) : $-2^{\circ} 38' 57''$
b. Semi diameter matahari pada waktu perkiraan gurub (s.dm): $15' 58,07''$
c. Refraksi matahari (R'm) : $34' 30''$
d. Equation of time pada waktu perkiraan gurub (e) : $09m 48d$

- 4) Dip : $1.76' \sqrt{90} \text{ m} = 16' 41,81''$
- 5) Tinggi matahari (hm) = $-(s.dm + R'm + Dip) = 15' 8,07'' + 34' 30'' + 16' 41,81'' = -01^\circ 07' 09,88''$
- 6) Sudut waktu matahari (tm): $\cos^{-1} \tan \{-\tan \varphi \delta m + \sin hm \sec \varphi \sec \delta m\} =$
 $= \cos^{-1} \{-\tan -07^\circ 48' \tan -02^\circ 38' 57'' + \sin -01^\circ 07' 09,88'' \sec -07^\circ 48' \sec -02^\circ 38' 54''\}$
 $= \cos^{-1} \{0.13698296 \times -0.046255082 + (-0.019536166) \times 1.009338561 \times 1.001069195\}$
 $= \cos^{-1} \{-0.0063361589 + -0.019739689\}$
 $= \cos^{-1} \{-0.02607584\} = 91.49432057 = 91^\circ 29' 9,55''$
 $= 91^\circ 29' 39,55'' : 15 = 6j 05m 58,64d$
- 7) Ephemeris Transit (E.T.) = $12J - e = 12j - (9m 48d)$
 $= 11j 50m 12d$
- 8) Gurub jam setempat = $tm + e.t. = 6j 05m 58,64d + 11j 50m 12d = 17j 56m 10,64d$
- 9) Selisih waktu bujur (sw λ) = $/\lambda t - \lambda d/ : 15 =$
 $/110^\circ 21' - 105^\circ/ : 15 = 05^\circ 21' : 15 = 21m 24d.$
- 10) Gurub WIB = (gurub waktu setempat – sw λ)
 $= 17j 56m 10,64d - 21m 24d = 17j 34m 46,64d$
 (dibulatkan [**belum ditambah ihtiyat**] menjadi pukul **17:35**).

Hitung Ulang

- 1) Koordinat kota Yogyakarta: $\varphi = -07^{\circ} 48'$; $\lambda = 110^{\circ} 21'$
BT; ketinggian 90 m
- 2) Perkiraan terbenamnya matahari Senin 29-09-2008
pukul 17:35 WIB (10:35 WU)
- 3) a . Delinasi matahari pada waktu perkiraan gurub (δm)
: $-2^{\circ} 38' 32,83''$
b. Semi diameter matahari pada waktu perkiraan gurub
(s.dm): $15' 58,3''$
c. Refraksi matahari ($R'm$) : $34' 30''$
d. Equation of time pada waktu perkiraan gurub (e) :
09m 47,58d
- 4) Dip : $1.76' \sqrt{90} \text{ m} = 16' 41,81''$
- 5) Tinggi matahari (hm) = $-(s.dm + R'm + Dip) = 15' 58,3'' + 34' 30'' + 16' 41,81'' = -01^{\circ} 07' 10,11''$
- 6) Sudut waktu matahari (tm): $\cos^{-1} \{-\tan f \tan dm + \sin hm \sec f \sec dm\} =$
 $= \cos^{-1} \{-\tan -07^{\circ} 48' \tan -02^{\circ} 38' 29,83'' + \sin -01^{\circ} 07' 09,88'' \sec -07^{\circ} 48' \sec -02^{\circ} 38' 29,83''\}$
 $= \cos^{-1} \{0.13698296 \times -0.046137652 + (-0.019536166) \times 1.009338561 \times 1.001063776\}$
 $= \cos^{-1} \{-0.006320022253 + (-0.019739582)\}$
 $= \cos^{-1} \{-0.026059654\} = 91.49345704 = 91^{\circ} 29' 36,45''$
 $= 91^{\circ} 29' 36,45'' : 15 = 06j 05m 58,47d$

- 7) Ephemeris Transit (e.t.) = $12J - e = 12j - (9m\ 46,5d) = 11j\ 50m\ 13,5d$
- 8) Gurub jam setempat = $t_m + e.t. = 6j\ 5m\ 58,47d + 11j\ 50m\ 12,42d = 17j\ 56m\ 10,89d$
- 9) Selisih waktu bujur ($sw\lambda$) = $\lambda_t - \lambda_d / 15 = 110^\circ\ 21' - 105^\circ / 15 = 05^\circ\ 21' / 15 = 21m\ 24d.$
- 10) Gurub WIB = (gurub waktu setempat – $sw\lambda$)
 $= 17j\ 56m\ 10,89d - 21m\ 24d = 17j\ 34m\ 46,89d$
 (dibulatkan [**belum ditambah ihtiyat**] menjadi pukul **17:35**).

3. Menghitung Tinggi Bulan Saat Terbenam Matahari

- 1) Deklinasi Bulan (δ_b) pukul 10:35 WU (17:35 WIB) = -06°
- 2) Right Ascension Bulan (α_b) pukul 10:35 WU (17:35 WIB) = $185^\circ\ 37'\ 32,17''$
- 3) Right Ascension Matahari (α_m) pukul 10:35 WU (17:35 WIB) = $186^\circ\ 06'\ 29,75''$
- 4) Sudut waktu Bulan (tb) = $(\alpha_m - \alpha_b) + t_m =$
 $= (186^\circ\ 06'\ 37,75'' - 185^\circ\ 37'\ 27,5'') + 91^\circ\ 29'\ 36,45''$
 $= 28'\ 10,25'' + 91^\circ\ 29'\ 36,45''$
 $= 91^\circ\ 58'\ 46,7''$
- 5) Tinggi bulan hakiki (hb) = $\sin^{-1} \{ \sin \varphi \sin \delta_b + \cos \varphi \cos \delta_b \cos tb \}$

$$\begin{aligned}
&= \sin^{-1} \{ \sin - 07^\circ 48' \sin - 06^\circ 42' 57,33'' + \cos - 07^\circ 48' \cos - 06^\circ 42' 57,33'' \cos 91^\circ 58' 46,7'' \\
&= \sin^{-1} \{ - 0.135715572 \times - 0.116961222 + 0.99074784 \\
&\quad \times 0.993136482 \times (-0.0344798) \} \\
&= \sin^{-1} \{ (- 0.015873459) + (- 0.03392632) \} \\
&= \sin^{-1} \{ - 0.018052868 \} \\
&= - 01^\circ 02' 03,87'' \\
&= - 01^\circ 02' 17,39''
\end{aligned}$$

6) Horizontal Paralax Bulan (HPb) pukul 10:35 WU (17:35 WIB) = $0^\circ 56' 20,5''$

$$\begin{aligned}
7) \text{ Paralax Bulan (Pb)} &= \cos hb \times HPb = \\
&= \cos -1^\circ 2' 03,87'' \times 0^\circ 56' 20,5'' \\
&= 0.999837034 \times 0^\circ 56' 20,5'' \\
&= 0^\circ 56' 19,28''
\end{aligned}$$

8) Semi diameter Bulan (SDb) pukul 10:35 WU (17:35 WIB) = $15' 21,04''$

$$\begin{aligned}
9) \text{ Tinggi Bulan mar'i (h'b)} &= (hb - Pb) + R'b + SDb + Dip \\
&= - 01^\circ 02' 03,87'' - 0^\circ 56' 19,95'' = - 01^\circ 58' 23,82'' \\
&= - 01^\circ 58' 23,82'' + 34' 30'' + 15' 21,14 + 16' 41,81' \\
&= - 0^\circ 52' 03,82''.
\end{aligned}$$

10) Tinggi bulan saat matahari terbenam Senin 29-09-2008 adalah $- 0^\circ 52' 03,82''$.

1. Waktu Shalat

Metode hisab yang digunakan untuk menghitung waktu-waktu salat, berdasarkan posisi matahari terhadap horizon, lengkap dengan parameter-parameter astronomi seperti tinggi matahari, deklinasi, dan sudut kedalaman fajar serta senja.

Dari ketentuan yang termuat dalam al-Quran dan hadis seba gaimana dikemukakan di atas dapat dipahami bahwa ketentuan salat tersebut berkaitan dengan posisi matahari. Oleh karena itu dalam penentuan awal waktu salat, data astronomis (zij) terpenting adalah posisi matahari, terutama tinggi [irtif±' (h)], atau jarak zenit [al-bu'd as-sam³t (z)], $z = 90^\circ - h$. Fenomena fajar (morning twilight), matahari terbit (sunrise), matahari melintasi meridian (culmination), matahari terbenam (sunset), dan akhir senja (evening twilight) berkaitan dengan jarak zenit matahari.

Waktu Zuhur diawali sejak matahari berkulminasi atas, namun untuk kehati-hatian dan kepastian waktu Zuhur dirumuskan sejak seluruh bundaran matahari meninggalkan meridian, biasanya diambil sekitar 2 menit setelah kulminasi. Saat berkulminasi atas pusat bundaran matahari berada di meridian.

Awal waktu Asar ketika matahari membuat bayang-bayang sama panjang dengan bendanya ditambah bayang-bayangnya pada saat matahari berkulminasi. Adapula yang mengambil cara mudah yaitu mengambil tetengah antara kulminasi dan gurub. Ini disimpulkan dari hadis Ibn 'Abb±s yang dikaitkan dengan bahwa hadis itu disabdakan saat

matahari berkulminasi atas tepat di atas Kakbah sehingga tidak menciptakan bayang-bayang dan waktu Asar adalah ketika bayang-bayang sepanjang bendanya, maka waktu Asar adalah pertengahan antara kulminasi dan gurub.

Waktu Magrib dalam ilmu falak berarti saat terbenamnya Matahari (gurub) di mana seluruh piringan Matahari tidak kelihatan oleh pengamat. Piringan matahari rata-rata berdiameter 32 menit busur, setengahnya berarti 16 menit busur, selain itu di dekat horison terdapat refraksi yang menyebabkan kedudukan matahari lebih tinggi dari kenyataan sebenarnya yang diasumsikan 34,5 menit busur. Koreksi semidiameter piringan Matahari dan refraksi terhadap jarak zenit matahari saat matahari terbit atau terbenam adalah sebesar semidiameter dikoreksi refraksi atau sering dibulatkan sebesar 50 menit busur. Oleh karena itu terbit dan terbenam matahari secara falak ilmi didefinisikan bila jarak zenit matahari mencapai $z = 90^\circ 50'$. Definisi itu untuk tempat pada ketinggian di permukaan air laut atau jarak zenit matahari $z = 91^\circ$ bila memasukkan koreksi kerendahan ufuk akibat tinggi posisi pengamat 30 meter dari permukaan laut. Secara lebih detil kedudukan matahari waktu Magrib adalah $z = 90^\circ + (s.d. + R' + Dip)$ atau $h = - (s.d.+R'+Dip)$.

Waktu Isya ditandai dengan mulai memudarnya cahaya merah (asy-Syafaq al-Aÿmar) di bagian langit sebelah barat, yaitu tanda masuknya gelap malam (Q.S. Al-Isra' ayat 78). Peristiwa ini dalam falak ilmi dikenal sebagai akhir senja astronomi

(astronomical twilight). Pada saat itu matahari berkedudukan 18° di bawah ufuk (horizon) sebelah barat atau bila jarak zenit matahari = 108° .

Waktu Subuh adalah sejak terbit fajar sadik sampai waktu terbit matahari. Fajar sadik dalam falak ilmi difahami sebagai awal astronomical twilight (fajar astronomi), cahaya ini mulai muncul di ufuk timur menjelang terbit matahari pada saat matahari berada sekitar 18° di bawah ufuk (atau jarak zenit matahari = 108°).

Langkah-langkah Hisab Awal Waktu Salat

Secara umum perhitungan awal waktu salat itu melalui empat langkah, yaitu penyediaan data, penyediaan rumus-rumus, pemrosesan data

melalui rumus, dan penarikan kesimpulan. Keempat langkah ini berlaku untuk semua perhitungan awal waktu salat, bahkan untuk perhitungan waktu terbit matahari (syuruq).

Penyediaan Rumus-rumus

a . Rumus Ketinggian Matahari (h)

1) Awal Waktu Salat Zuhur

Untuk awal waktu salat Zuhur tidak memerlukan rumus ketinggian matahari, sebab secara langsung data untuk awal waktu salat Zuhur dapat dilihat pada almanak astronomis, yaitu saat Matahari berkulminasi.

2) Awal Waktu Salat Asar

$$\cotan h = \tan z_m + 1$$

$$z_m = \varphi - \delta$$

Keterangan

h = Ketinggian matahari

φ = Lintang tempat

δ = Deklinasi matahari

z_m = Jarak zenit pada saat matahari berkulminasi

3) Awal Waktu Salat Magrib dan Terbit Matahari.

$$h = - (s.d. + R' + Dip)$$

$$Dip = 1,76' \sqrt{m}$$

s.d. = Semi Diameter Matahari

R' = Refraksi

Dip = Kerendahan ufuk

m = Ketinggian tempat dari permukaan laut atau dari daerah sekitar (markaz) diukur dengan ukuran meter

- 4) Awal Waktu Salat Isya ($h = -18^\circ$)
- 5) Awal Waktu Salat Subuh ($h = -20^\circ$)

b . Rumus Sudut Waktu Matahari (t)

$$\cos t = - \tan \varphi \tan \delta + \sin h / \cos \varphi \cos \delta$$

t = Sudut waktu matahari pada awal waktu salat

φ = Lintang tempat

δ = Deklinasi matahari

h = Ketinggian matahari

c . Rumus Ephemeris Transit (e.t.)

$$e.t. = 12j - e$$

e = Equation of Time (perata waktu)

d . Rumus Selisih Waktu Bujur

$$\text{Selisih waktu bujur (sw}\lambda) = (\lambda_{tp} - \lambda_{dh})/15$$

λ_{tp} = Bujur tempat

λ_{dh} = Bujur tolok waktu daerah

e . Rumus Penyimpulan

- 1) Awal waktu salat Zuhur= e.t.-(atau+) selisih waktu bujur+i
- 2) Awal waktu salat Asar, Magrib dan Isya=(e.t.+t)-(atau+) selisih waktu bujur+i
- 3) Awal waktu salat Subuh = (e.t.-t) - (atau +) selisih waktu bujur + i

4) Waktu terbit (syuruq) = (e.t.-t) - (atau +)
selisih waktu bujur - i

f. Contoh Hisab Awal Waktu Salat

1. Awal waktu salat Zuhur untuk kota Yogyakarta dan sekitarnya menurut WIB pada tanggal 6 Desember 2008.

1) Data:

a. Lintang tempat (φ) = $-07^{\circ} 48'$

b. Bujur tempat (λ) = $110^{\circ} 21'$ BT.

c. Equation of Time (e) = +08m 54

2) Rumus awal waktu Zuhur

Zuhur = e.t. -/+ (sw λ) + i

e.t. = 12j - e

3) Proses Perhitungan

Ephemeris Transit (e.t.) = 12j - e

= 12j - 08m 54d

= 11j 51m 06d WST

Selisih waktu bujur (sw λ) = $/110^{\circ} 21' - 105^{\circ} / : 15$

= $05^{\circ} 21' : 15$

= 21m 24d

e.t. - sw λ = 11j 51m 06d - 21m 24d

= 11j 29m 42d WIB

Ihtiyat = 01m 18d +

Zuhur = 11j 31m WIB

Kesimpulan: Awal waktu salat Zuhur di Yogyakarta tanggal 6 Desember 2008 pukul 11:31 WIB.

2. Awal waktu salat Asar untuk kota Yogyakarta dan sekitarnya menurut WIB pada tanggal 6 Desember 2008.

1) Data:

a . Lintang tempat (φ) = $-07^{\circ} 48'$

b. Bujur tempat (λ) = $110^{\circ} 21'$ BT.

c. Equation of Time (e) = +08m 51d

d. Deklinasi matahari (δ) = $-22^{\circ} 32' 53''$

2) Rumus awal waktu Asar

$$\text{Asar} = [(e.t.+t) -/+ sw\lambda] + i$$

$$e.t. = 12j - e$$

$$t = \cos^{-1} (-\tan \varphi \tan \delta + \sin h / \cos \varphi \cos \delta)$$

$$h = \cotan^{-1} (\tan z_m + 1)$$

$$z_m = / \varphi - \delta /$$

$$sw\lambda = / \lambda_{tp} - \lambda_{dh} / : 15$$

3) Proses Perhitungan

Tinggi matahari (h): $\cotan h = \tan z_m + 1$

$$z_m = / \varphi - \delta / = / -07^{\circ} 48' - (-22^{\circ} 32' 53'') /$$

$$= 14^{\circ} 44' 52''$$

$$\cotan h = \tan z_m + 1$$

$$= \tan 14^{\circ} 44' 52'' + 1$$

$$= 0,263236555 + 1$$

$$= 1,263236555$$

$$= 38^{\circ} 21' 56,28''$$

Sudut waktu matahari (t):

$$\cos t = -\tan \varphi \tan \delta + \sin h / (\cos \varphi \cos \delta)$$

$$= -\tan -07^{\circ} 48' \tan -22^{\circ} 32' 53'' +$$

$$\sin 38^{\circ} 21' 56,28'' / (\cos -07^{\circ} 48' \cos -22^{\circ} 32' 53'')$$

$$\begin{aligned}
&= 0,13698296 \times (-0,41519085) + 0,620679196 / \\
&(0,99074784 \times 0,923560099) \\
&= -0,05687407 + 0,620679196 / 0,915015174 \\
&= -0,05687407 + 0,67832667 \\
&= 0,621452598
\end{aligned}$$

$$\begin{aligned}
t &= 51^\circ 34' 40,07'' : 15 &&= 03j 26m 18,67d \\
\text{e.t.} &= 12j - e = 12j - 08m 54d = \underline{11j 51m 9d} + \\
\text{e.t.} + t &&&= 15j 17m 27,67d \text{ WST} \\
\text{Selisih waktu bujur (sw}\lambda) &= /110^\circ 21' - 105^\circ / : 15 \\
&= 05^\circ 21' : 15 \\
&= 21m 24d
\end{aligned}$$

$$\begin{aligned}
(\text{e.t.} + t) - \text{sw}\lambda &&&= 15j 17m 27,67d \\
&&&- 21m 24d \\
&&&= 14j 56m 03,67d \text{ WIB} \\
\text{Ihtiyat} &&&= \underline{01m 56,33d} + \\
\text{Asar} &&&= 14j 58m \text{ WIB}
\end{aligned}$$

Kesimpulan: Awal waktu salat Asar di Yogyakarta tanggal 6 Desember 2008 pukul 14:58 WIB.

3. Awal waktu salat Magrib untuk kota Yogyakarta dan sekitarnya menurut WIB pada tanggal 6 Desember 2008.

1) Data

- a. Lintang tempat (φ) = $-07^\circ 48'$
- b. Bujur tempat (λ) = $110^\circ 21'$ BT.
- c. Tinggi tempat (m) = 90 meter
- d. Equation of Time (e) = 08m 48d
- e. Deklinasi matahari (δ) = $-22^\circ 33' 45''$
- f. Semi diameter matahari (s.d.) = $16' 14,03''$

g. Refraksi matahari (R') = $34' 30''$

2) Rumus awal waktu Magrib
 Magrib = [(e.t.+t) -/+ $sw\lambda$] + i
 e.t. = $12j - e$
 $t = \cos^{-1}(-\tan \varphi \tan \delta + \sin h / (\cos \varphi \cos \delta))$
 $h = -(s.d. + R' + Dip)$
 $Dip = 1,76' \sqrt{m}$
 $sw\lambda = / \lambda tp - \lambda dh / : 15$

3) Proses Perhitungan

$Dip = 1,76' \sqrt{m}$
 $= 1,76' \sqrt{90}$
 $= 16' 41,81''$

Tinggi matahari (hm): $h = -(s.d. + R' + Dip)$
 $= -(16' 14,03'' + 34' 30'' + 16' 41,81'')$
 $= -01^\circ 07' 25,84''$

Sudut waktu matahari (t):

$\cos t = -\tan \varphi \tan \delta + \sin h / (\cos \varphi \cos \delta)$
 $= -\tan -07^\circ 48' \tan -22^\circ 23' 45'' + \sin -01^\circ 07' 25,84'' / (\cos -07^\circ 48' \cos -22^\circ 33' 45'')$

$= 0,13698296 \times (-0,41205115) + (-0,01961347) /$
 $(0,99074784 \times 0,9234727)$
 $= -0,05644398 + (-0,01961347) / 0,914928584$
 $= -0,05644398 + (-0,02143717)$
 $= -0,07788115$

$t = 94^\circ 29' 38,01'' : 15 = 06j 17m 58,53d$
 $e.t. = 12j - e = 12j - 08m 54d = 11j 51m 12d +$
 $e.t. + t = 18j 9m 10,53d$
 WST

Selisih waktu bujur ($sw\lambda$) = $/110^\circ 21' - 105^\circ / : 15$

$$\begin{aligned}
&= 05^{\circ} 21' : 15 \\
&= 21m 24d \\
(e.t. + t) - sw\lambda &= 18j 9m 10,53d - 21m 24d \\
&= 17j 47m 46,53d \text{ WIB} \\
\text{Ihtiyat} &= \underline{01m 13,47d} + \\
\text{Magrib} &= 17j 49m \text{ WIB}
\end{aligned}$$

Kesimpulan: Awal waktu salat Magrib di Yogyakarta tanggal 6 Desember 2008 pukul 17:49 WIB.

4. Awal waktu salat Isya untuk kota Yogyakarta dan sekitarnya menurut WIB pada tanggal 6 Desember 2008.

1) Data

- Lintang tempat (φ) = $-07^{\circ} 48'$
- Bujur tempat (λ) = $110^{\circ} 21'$ BT.
- Equation of Time (e) = $08m 47d$
- Deklinasi matahari (δ) = $-22^{\circ} 34' 02''$
- Tinggi matahari (h) = -18°

2) Rumus awal salat Isya

$$\text{Isya} = [(e.t.+t) -/+ sw\lambda] + i$$

$$e.t. = 12j - e$$

$$t = \cos^{-1} (-\tan \varphi \tan \delta + \sin h / (\cos \varphi \cos \delta))$$

$$sw\lambda = / \lambda tp - \lambda dh / : 15$$

3) Proses Perhitungan

Sudut waktu matahari (t):

$$\cos t = -\tan \varphi \tan \delta + \sin h / (\cos \varphi \cos \delta)$$

$$= -\tan -07^{\circ} 48' \tan -22^{\circ} 34' 02''$$

$$+ \sin -18^{\circ} / (\cos -07^{\circ} 48' \cos -22^{\circ} 34' 02'')$$

$$= 0,13698296 \times (-0,41558877) + (-0,30901699) /$$

$$0,99074784 \times 0,923429913$$

\end{aligned}$$

$$\text{Ihtiyat} = \underline{01m 11,74d} +$$

$$\text{Isya} = 19j 04m \text{ WIB}$$

Kesimpulan: Awal waktu salat Isya di Yogyakarta tanggal 6 Desember 2008 pukul 19:04 WIB.

5. Awal waktu salat Subuh untuk kota Yogyakarta dan sekitarnya menurut WIB pada tanggal 6 Desember 2008.

1) Data

- a. Lintang tempat (φ) = $-07^\circ 48'$
- b. Bujur tempat (λ) = $110^\circ 21'$ BT.
- c. Equation of Time (e) = $+09m 03d$
- d. Deklinasi matahari (δ) = $-22^\circ 29' 39''$
- e. Tinggi matahari (h) = -20°

2) Rumus awal salat Subuh

$$\text{Subuh} = [(\text{e.t.} - t) - / + \text{sw}\lambda] + i$$

$$\text{e.t.} = 12j - e$$

$$t = \cos^{-1} (-\tan \varphi \tan \delta + \sin h / (\cos \varphi \cos \delta))$$

$$sw\lambda = /\lambda tp - \lambda dh / : 15$$

3) Proses Perhitungan

Sudut waktu matahari (t):

$$\cos t = -\tan \varphi \tan \delta + \sin h / (\cos \varphi \cos \delta)$$

$$= -\tan -07^\circ 48' \tan -22^\circ 29' 39'' + \sin -20^\circ$$

$$/ (\cos -07^\circ 48' \cos -22^\circ 29' 39'')$$

$$= 0,13698296 \times (-0,4140886) + (-0,34202014) /$$

$$0,99074784 \times 0,923920344$$

$$= -0,05672308 + (-0,34202014) / 0,915372085$$

$$= -0,05672308 + (-0,37364056)$$

$$= -0,43036364$$

$$t = 115^\circ 29' 26,6'' : 15 = 07j 41m 57,78d$$

$$e.t. = 12j - e = 12j - 08m 54d = 11j 50m 57d$$

$$= 07j 41m 57,78d -$$

$$e.t. - t = 04j 08m 59,22d \text{ WST}$$

$$\text{Selisih waktu bujur (sw}\lambda) = /110^\circ 21' - 105^\circ / : 15$$

$$= 05^\circ 21' : 15$$

$$= 21m 24d$$

$$(e.t. - t) - sw\lambda = 04j 08m 59,22d - 21m 24d$$

$$= 03j 47m 35,22d \text{ WIB}$$

$$\text{Ihtiyat} = \underline{01m 26,78d} +$$

$$\text{Subuh} = 03j 49m \text{ WIB}$$

Kesimpulan: Awal waktu salat Subuh di Yogyakarta tanggal 6 Desember 2008 pukul 03:49 WIB.

6. Waktu terbit matahari (syuruq) untuk kota Yogyakarta dan sekitarnya menurut WIB pada tanggal 6 Desember 2008.

1) Data

- a. Lintang tempat (ϕ) = $-07^{\circ} 48'$
- b. Bujur tempat (λ) = $110^{\circ} 21'$ BT.
- c. Tinggi tempat (m) = 90 meter
- d. Equation of Time (e) = $+09m 02d$
- e. Deklinasi matahari (δ) = $-22^{\circ} 29' 59''$
- f. Semi diameter matahari (s.d.) = $16' 13,95''$
- g. Refraksi matahari (R') = $34' 30''$

2) Rumus terbit Matahari

$$\text{Magrib} = [(e.t.-t) -/+ sw\lambda] - i$$

$$e.t. = 12j - e$$

$$t = \cos^{-1} (-\tan \phi \tan \delta + \sin h / (\cos \phi \cos \delta))$$

$$h = -(s.d. + R' + \text{Dip})$$

$$\text{Dip} = 1,76' \sqrt{m}$$

$$sw\lambda = / \lambda_{tp} - \lambda_{kb} / : 15$$

3) Proses Perhitungan

$$\text{Dip} = 1,76' \sqrt{m} = 1,76' \sqrt{90} = 16' 41,81''$$

Tinggi matahari (h):

$$h = -(s.d. + R' + \text{Dip})$$

$$= -(16' 13,95'' + 34' 30'' + 16' 41,81'')$$

$$= -01^{\circ} 07' 25,76''$$

Sudut waktu matahari (t):

$$\cos t = -\tan \phi \tan \delta + \sin h / (\cos \phi \cos \delta)$$

\text{Ihtiyat} &= \underline{01m 38,03d} - \\
\text{Terbit} &= 05j 10m \text{ WIB}
\end{aligned}$$

Kesimpulan: Waktu terbit matahari di Yogyakarta tanggal 6 Desember 2008 pukul 05:10 WIB.

2. Arah Kiblat

Menguraikan metode penentuan arah kiblat dari suatu lokasi berdasarkan koordinat geografis dan kaidah geodesi, termasuk teknik hisab menggunakan rumus segitiga bola serta momen Rashdul Qiblat sebagai metode verifikasi arah secara alami.

A. Definisi Kiblat dan Ka'bah

Menghadap kiblat adalah satu keharusan (syarat) untuk sah dan kualitasnya salat seorang Muslim. Kiblat (al-qiblah) secara bahasa bermakna menghadap atau berhadapan (al-muqabalah). Ka'bah adalah bangunan suci berbentuk mendekati kubus (muka'ab) yang terletak di Kota Mekkah. Dari kata muka'ab inilah berikutnya bangunan ini disebut dengan 'Ka'bah.' Ar-Razi (w.666/1267) dalam

Mukhtar as-Sahhah mengatakan, Ka'bah disebut demikian karena bentuknya yang persegi empat dan memanjang?

Ka'bah disebut demikian juga karena bentuk bangunannya yang meninggi di mana dalam tradisi orang-orang Arab bangunan seperti ini biasa disebut dengan Ka'bah.? Al-Ka'b dalam bahasa Arab bermakna tiang yang menjulang tinggi yang menyatu bagian depan dan belakangnya.

B. Dalil Kiblat

هُوَ الَّذِي جَعَلَ لَكُمُ النُّجُومَ لِتَهْتَدُوا بِهَا فِي ظُلُمَاتِ اللَّيْلِ وَالْبَحْرِ
قَدْ فَصَّلْنَا الْآيَاتِ لِقَوْمٍ يَعْلَمُونَ

Dan dialah yang menjadikan bintang-bintang bagimu, agar kamu menjadikannya petunjuk dalam kegelapan di darat dan di laut. Sesungguhnya kami telah menjelaskan tanda-tanda kebesaran (kami) kepada orang-orang yang mengetahui (QS Al-An'ām [06]: 97).

وَعَلَّمْتُمُوهَا بِالنَّجْمِ هُمْ يَهْتَدُونَ

Dan (la ciptakan) tanda-tanda, dan dengan bintang-bintang itulah mereka mendapat petunjuk (QS An-Nahl [16]: 16).

وَمَنْ حَبِثُ حَرَجْتُ قَوْلٍ وَجَهَكَ سَطَرَ الْمَسْجِدِ الْحَرَامِ وَحَبِثُ مَا
كُنْتُمْ قَوْلُوا وَجُوهَكُمْ سَطْرَهُ لِيَأْتِيَ النَّاسَ عَلَيْكُمْ حُجَّةٌ إِلَّا
الَّذِينَ ظَلَمُوا مِنْهُمْ فَلَا تَحْشَوْهُمْ وَاحْشَوْنِي وَلَا تَمَّ نِعْمَتِي عَلَيْكُمْ
وَأَعَلَّكُمْ تَهْتَدُونَ

Dan dari mana saja kamu (keluar), maka palingkanlah wajahmu ke arah Masjidil Haram. Dan di mana saja kamu berada, maka palingkanlah

wajahmu ke arahnya, agar tidak ada hujah bagi manusia atas kamu, kecuali orang-orang yang zalim di antara mereka. Maka janganlah kamu takut kepada mereka dan takutlah kepada-Ku (saja), dan agar Kusempurnakan nikmat: Kusatasmu, dan supaya kamu mendapat petunjuk. (QS Al-Baqarah [02]: 150).

Firman Allah OS Al-Baqarah [02] ayat 150 di atas menyatakan wajibnya menghadap baitullah (Ka'bah) tarkala salat. Namun ulama berbeda pendapat tentang detail menghadap yang dimaksud dalam ayat tersebut. Sebagian ulama berpendapat yang diwajibkan adalah menghadap bangunan fisik Ka'bah, sebagian ulama lagi menyatakan arah (jihah, isabah) Ka'bah saja.

Secara umum, jumhur ulama, terkecuali Syafi'iyah, berpandangan jika seseorang berada jauh dari Mekkah, diharuskan menghadap arah Ka'bah, namun jika berada di Mekkah atau sekitarnya diharuskan menghadap bangunan Ka'bah. Sementara ulama Syafi'iyah menyatakan meski berada jauh dari Mekkah tetap diwajibkan mengarahkan pandangan ke bangunan Ka'bah, dengan alasan firman Allah "...dan di mana saja kamu berada maka palingkanlah wajah kamu ke arahnya". Lebih jauh lagi kalangan Syafi'iyah menyatakan, berpalingnya arah kiblat meski sedikit saja (al-inhiräf al-yasir) membawa konsekuensi pada batalnya salat.

C. Sejarah Kiblat

Ka'bah, di masa pra-Islam adalah bangunan sebagai tempat penyembahan di mana bertaburan berhala-berhala. Risalah Islam yang dibawa baginda Nabi Muhammad Saw. menebas habis berhala-berhala tersebut, hingga bangunan ini dijadikan sebagai tempat ibadah dan dijadikan kiblat salat.

David King, sejarawan ilmu pengetahuan (sains), yang mencurahkan hidupnya di bidang ini menyebutkan, penentuan, arah kiblat pada zaman silam, tepatnya abad pertengahan pada umumnya melalui penampakan arah munculnya bintang Canopus (*najm suhail*) yang kebanyakan terbit di bagian belahan bumi bagian selatan. Di lain tempat, melalui arah terbitnya matahari pada solstice musim panas, di samping empat pola pergerakan angin yang ada. Dua arah ini, lebih kurangnya tegak lurus pada garis lintang Kota Mekkah. Dengan cara inilah, dalam kurun berabad-abad kaum muslimin menentukan arah kiblat.

Hadis Nabi Saw. menyatakan "*ma baina al-masyriq wa al-magrib qiblah*" (di antara timur dan barat terdapat kiblat). Dalam praktiknya Nabi Saw. memang salat menghadap arah selatan yang berarti tepat menghadap Ka'bah. Dengan standar ini (baca: menghadap arah selatan), kaum muslimin di berbagai wilayah berpatokan pada arah ini sebagai optimisme terhadap Nabi Saw. Generasi pertama (sahabat) berpatokan terhadap standar ini dalam

mendirikan masjid di Andalusia (Spanyol) hingga Asia Tengah.

Di Suriah dan Palestina patokan arah selatan menjadi acuan utama arah kiblat, Masjid Al-Aqsa dibangun hampir tepat menghadap arah selatan dan bertahan selama beberapa abad. Hingga melalui penelitian para ahli terbukti arah kiblat di *Quds* (Palestina) terletak sekitar 45° bujur timur menuju Barat.

Di Mesir, masjid pertama dibangun adalah Masjid Amu bin Ash yang terletak di Kota Fustat (sekarang Kairo). Kiblat masjid ini dibangun berpedoman pada arah terbitnya matahari pada solstice musim dingin, patokan ini bertahan dan berkembang selama kurun abad pertengahan.

Di tempat lain, di Irak, masjid-masjid dibangun tepat menghadap arah terbenamnya matahari pada *solstice* musim dingin, dengan menjadikan searah dengan arah tembok utara-timur tiang Ka'bah, yang jika seseorang berdiri menghadap tiang tersebut, secara persis memandang arah terbenamnya matahari di musim tersebut. Berikutnya lagi di bagian utara-barat Afrika, arah kiblat berpedoman pada terbitnya matahari pada equinoks (*i tidalain syarg haqiqy*). Di Yaman, kiblat ditentukan berdasarkan arah angin utara atau pada arah bintang kutub utara, di Suriah berdasarkan terbitnya bintang Canopus, di India pada arah terbenamnya matahari pada equinoks.

Atas fakta sejarah di atas, King memandang betapa perlunya dilakukan penelitian komprehensif terhadap arah kiblat masjid-masjid di penjuru dunia. Ia menyatakan, hingga saat ini belum ada aktivitas memadai seperti dimaksud, yang ada hanya berupa penelitian awal. Jika proyek ini dapat terealisasi sejatinya akan memberi sumbangan berharga terhadap sejarah perkiblatan di jagad raya.

D. Urutan dan Tata Cara Penentuan Arah Kiblat

Abdurrahman al-Jaziri dalam karyanya “*Al-Fiqh ‘ala al-Mazahib al-‘Arba’ah*” merinci tata cara dan urutan penentuan arah kiblat menurut empat mazhab, kesimpulannya sebagai berikut:

1. Hanafiyah

- a. Berpatokan pada mihrab masjid-masjid kuno yang pernah dibangun oleh sahabat dan tabiin, seperti Masjid Umawiyah Damaskus-Suriyah, Masjid Amru bin Ash di Mesir, Masjid Uqbah bin Nafi’ (atau Masjid Al-Qairawan) di Tunisia, dan lain-lain.
- b. Bertanya pada orang lain dengan ketentuan: bertanya pada yang terdekat (penduduk setempat), orang yang ditanya mengerti tentang arah kiblat, yang ditanya bukan orang kafir, fasik dan anak-anak.
- c. Jika dua cara di atas tidak terpenuhi, salatlah dengan apa adanya (*zan*).

2. Malikiyah

- a. Berpatokan pada mihrab masjid-masjid kuno yang ada.
- b. Mencari, meneliti (*taharrā*) jika mampu melakukannya dan tidak boleh bertanya pada orang lain.
- c. Bertanya kepada orang lain ketika tidak mampu dan tidak tersedia alat-alat untuk menentukan arah kiblat.

3. Syafi'iyah

- a. Mencari, menetapkan sendiri tanpa bertanya pada orang lain.
- b. Bertanya pada orang yang dapat dipercaya dan ahli dalam menentukan arah kiblat.
- c. Berijtihad.
- d. Mengikuti orang berijtihad (*taqlid al-mujtahid*).

4. Hanabilah

- a. Berpatokan pada mihrab masjid-masjid kuno yang ada.
- b. Bertanya pada orang adil. Jika orang yang memberi informasi (*mukhbir*) mengetahui secara pasti wajiblah mengikutinya, dan jika hanya dugaan (*zān*) saja, boleh mengikutinya dengan syarat jika waktu salat telah sempit, namun jika waktu salat masih lapang diharuskan mencari tau lebih dahulu.

Seperti dijelaskan para ulama, penentuan arah kiblat dalam Islam bersifat *ijtihad*. Tata cara yang sering digunakan dalam pengukuran dan penentuan arum ukur modern saat ini ada tiga. *Pertama*, menggunakan ilmu ukur segi tiga bola. *Kedua*, memanfaatkan bayang-bayang kiblat. *Ketiga*, memanfaatkan fenomena matahari melintas di atas Ka'bah.

Secara umum, data-data yang dibutuhkan dalam proses perhitungan arah kiblat modern adalah:

1. Lintang tempat atau *latitude* (ϕ) yaitu garis vertikal yang menyatakan jarak sudut sebuah titik dari lintang nol derajat yaitu garis ekuator. Lintang terbagi dua: Lintang Utara (LU) yang bernilai positif dan Lintang Selatan (LS) yang bernilai negatif.
2. Bujur tempat atau *longitude* (λ), yaitu garis horizontal yang menyatakan jarak sudut sebuah titik dari bujur nol derajat yaitu garis *prime meridian*. Bujur terbagi dua yaitu bujur Timur (BT) yang bernilai positif dan Bujur Barat (BB) yang bernilai negatif.
3. Lintang Ka'bah (ϕ_k) yaitu $21^\circ 25'$.
4. Bujur Ka'bah (λ_k) yaitu $39^\circ 50'$.

1. Menggunakan Ilmu Ukur Segi Tiga Bola

Ilmu ukur segi tiga bola atau disebut juga dengan Trigonometri adalah ilmu pengukur jarak sudut suatu benda. Ilmu ini mulai diterapkan dalam Islam sejak masa Al-Khawarizmi (w. 387/997) melalui karya monumentalnya "*Al-Jabr wa al-Muqabalah*". Ilmu ini tidak hanya berguna dalam menentukan arah kiblat namun berguna dalam banyak hal khususnya yang berkaitan dengan ibadah umat Islam seperti perhitungan awal bulan dan waktu salat.

Pengukuran arah kiblat dari dua wilayah yang berbeda tidak bisa dilakukan dengan menarik garis lurus. Dengan bantuan ilmu ukur segi tiga bola posisi Ka'bah yang berada di kota mulia Mekkah dapat dihitung dengan terlebih dahulu diketahui data astronomis wilayah yang akan di cari, data astronomis Kota Mekkah dan posisi Kutub Utara. Berikutnya dapat dilakukan dengan mengoperasionalkan rumus berikut.

$$\mathbf{AK = atn (1 : (cotan b \times sin a : sin c - cos a \times cotan c))}$$

Keterangan:

a → adalah jarak antara titik kutub utara sampai garis lintang yang melewati suatu lokasi yang dihitung arah kiblatnya.

$$\mathbf{a = 90^\circ - \varphi T}$$

b → adalah jarak antara titik kutub utara sampai garis lintang yang melalui Ka'bah.

$$\mathbf{b = 90^\circ - \varphi K}$$

c → adalah selish bujur antara bujur suatu lokasi dengan bujur Ka'bah.

$$\mathbf{c = \lambda T - \lambda K}$$

Misal I: Perhitungan arah kiblat kota Medan (Sumatera Utara)

Data diperlukan:

a. Ka'bah → Lintang ($21^\circ 25' LU$), Bujur ($39^\circ 49' BT$)

b. Medan → Lintang ($3^\circ 38'$), Bujur ($98^\circ 38'$)

c. $a = 90^\circ - (3^\circ 38') = 86^\circ 22'$

d. $b = 90^\circ - 21^\circ 25' = 68^\circ 35'$

e. $c = 98^\circ 38' - 39^\circ 50' = 58^\circ 48'$

Rumus:

$$\mathbf{AK = atn (1 : (cotan b \times sin a : sin c - cos a \times cotan c))}$$

Maka $AK = atn (1: (cotan $68^\circ 35'$ x $sin 86^\circ 22'$: $sin 58^\circ 48' - cos 86^\circ 22' \times cotan 58^\circ 48'))$$

$= 67,25393198 (67^\circ 15' 14,16'') \rightarrow$ Arah kiblat kota Medan.

Dengan demikian dapat disimpulkan bahwa arah kiblat kota 1 adalah $43^\circ 47'$.

2. Memanfaatkan Bayang-bayang Kiblat

Bayang-bayang kiblat terjadi ketika matahari membentuk lingkaran bayangan yang tepat searah Ka'bah (kiblat) yaitu ketika Deklinasi Matahari memotong garis arah kiblat, maka bayangan matahari ketika itu membentuk arah kiblat. Penentuan arah kiblat dengan memanfaatkan bayang matahari ini tergolong akurat. Bayang-bayang kiblat ini hampir setiap hari muncul, namun bergantung pada situasi cuaca dan langit, jika langit mendung (berawan) dan atau hujan maka pada hari itu praktik penentuan bayang kiblat akan menemukan kesulitan.

Firman Allah dalam QS Al-Furqan [25]: 45 menyatakan bahwa pada hakikatnya bayang-bayang matahari sebagai petunjuk, di antaranya petunjuk menentukan arah kiblat. Firman Allah,

"Apakah kamu tidak memerhatikan (penciptaan) Tuhanmu, bagaimana Dia memanjangkan (dan memendekkan) bayang-bayang dan kalau Dia menghendaki niscaya Dia menjadikan tetap bayang-bayang itu, kemudian Kami jadikan matahari sebagai petunjuk atas bayang-bayang itu, kemudian Kami menarik bayang-bayang itu kepada kami dengan tarikan yang perlahan-lahan" (QS Al-Furqan [25]: 45)

Penentuan bayang kiblat dapat dilakukan dengan meng-operasionalkan serangkaian persamaan (rumus) berikut:

Rumus:

BK	=	MP + KWD + (SF - SQ): 15
MP	=	12 - e
KWD	=	(WB - λT): 15
SF	=	atn (1: (tan AK x sin φT)
SQ	=	ACS (cos SF x cotan φT x tan δM)

Keterangan:

BK = Bayang Kiblat
 AK = Arah Kiblat
 KWD = Koreksi Waktu Daerah
 MP = Meridian Pass
 λT = Bujur tempat
 φT = Lintang Tempat
 WB = Waktu Bujur
 δM = Deklinasi Matahari
 e = *Equation of Time* (e)

Catatan:

Jika $\delta M > 90 - AK$, maka pada hari itu tidak terjadi bayang kiblat karena bidang lingkaran garis kiblat tidak berpotongan dengan lingkaran paralel gerak harian matahari di siang hari. Perpotongan itu baru terjadi sesudah terbenam matahari atau sebelum terbit matahari.

Misal: Bayang-bayang kiblat tanggal 27 Juli 2026 M di kota Medan (Sumatera Utara).

Diketahui:

AK = 67° 15' (U-B)
 λT = 98° 38'
 φT = 3° 38'
 e = -00^j 06^m 29^d
 δM = 19° 08'

$$\text{MP} = 12 - -00^j 06^m 29^d = 12^j 06^m 29^d$$

$$\begin{aligned} \text{KWD} &= (105 - 98^\circ 38'): 15 \\ &= 0,4244444444 (00^j 25^m 28^d) \end{aligned}$$

$$\begin{aligned} \text{SF} &= \text{atn} (1: (\tan 67^\circ 15' \times \sin 3^\circ 38')) \\ &= 81,40631694 (81^\circ 24' 22,74) \end{aligned}$$

$$\begin{aligned} \text{SQ} &= \text{ACS} (\cos 81,40631 \times \cotan 3^\circ 38' \times \tan 19^\circ 08') \\ &= 35,27320962 (35^\circ 16' 23,55'') \end{aligned}$$

$$\begin{aligned} \text{BK} &= 12^j 6^m 29^d + 00^j 25^m 28^d + (81,40631694 - \\ &35,27320962): 15 \\ &= 15^j 37^m \text{ WIB} \end{aligned}$$

Maka: terjadinya bayang kiblat di Kota Medan pada tanggal 27 Juli 2026 adalah pukul **15^j 37^m WIB**

3. Fenomena Matahari Melintas Ka'bah

Fenomena matahari melintas di atas Ka'bah atau *istiwa a'zam* atau disebut juga dengan *rasd al-qiblah* adalah peristiwa astronomis saat posisi matahari berada tepat di atas Ka'bah atau ketika matahari berdeklinasi $21^{\circ} 25'$ yaitu sama dengan lintang Ka'bah (21°25'). Fenomena ini terjadi akibat gerak semu tahunan matahari yang hanya terjadi di daerah yang memiliki lintang tidak lebih dari $23,5^{\circ}$ LU dan $23,5^{\circ}$ LS. Dalam rentang ini matahari akan menyapu (menyinari) daerah-daerah yang memiliki Lintang antara $23,5^{\circ}$ LU dan $23,5^{\circ}$ LS.

Posisi matahari tepat berada di atas Ka'bah terjadi apabila deklinasi (δ) matahari sama dengan lintang (φ) Ka'bah atau Mekkah. Maka ketika itu matahari akan berkulminasi di atas Ka'bah dan arah terjadinya bayang matahari terhadap suatu benda lurus merupakan arah kiblat. Momen ini terjadi dua kali dalam setahun, yaitu tanggal 28 Mei pukul 12.18 (waktu Mekkah) atau 16:18 (WIB) dan tanggal 16 Juli pukul 12.27 (waktu Mekkah) atau 16:27 (WIB).

Sejak dahulu fenomena ini sudah diketahui, Nasiruddin at-Tûsi (w. 672/1273) misalnya, dalam "At-Tazkirah fî Ilm al-Hai'ah" sudah membahas hal ini. At-Tûsi mengatakan:

"Terdapat ragam cara mengetahui zenit kiblat (samt al-qiblah) - namun tidak tepat menguraikannya di sini-, namun secara mudah dan singkat; matahari akan melalui titik zenit (samt ar-ra's) ketika matahari berada pada posisi 8 derajat di rasi Gemini dan 23 derajat di rasi Cancer pada waktu pertengahan hari. Selisih antara tengah hari matahari ketika melintas dengan selisih tengah hari di berbagai tempat akan seukuran dua kali lipat (dua kali panjang), maka diambillah selisih tersebut. Berikutnya ditetapkan selisih tiap-tiap 15 derajat satu jam, dan satu derajat empat menit, maka hasilnya adalah jarak waktu dari tengah hari. Dan untuk melihat fenomena pada hari itu adalah pada waktu sebelum tengah hari jika Mekkah berada di sebelah Timur,

atau sesudahnya jika Mekkah berada di sebelah Barat, maka bayangan itu adalah waktu terjadinya zenit kiblat".

Fenomena matahari melintasi Ka'bah dalam setahun yang membentuk bayang kiblat di berbagai wilayah di permukaan bumi ini menegaskan kesesuaian posisi dan fungsi Ka'bah secara sempurna sebagai kiblat dan pusat dunia. Menghadap kiblat mengharuskan setiap orang mengerti tata cara ilmiah untuk menetapkan dan menghadanya dari berbagai tempat di permukaan bumi, namun dengan fenomena ini orang awam pun dapat melakukannya.

3. Awal Bulan Kamariyah

Penentuan awal bulan kamariyah atau Hijriah merupakan salah satu aspek penting dalam kalender Islam, karena berhubungan langsung dengan pelaksanaan ibadah-ibadah utama seperti puasa Ramadhan, Idul Fitri, Idul Adha, hingga penentuan hari Arafah. Dalam tradisi Islam, penetapan awal bulan tidak hanya bersifat administratif, tetapi juga sakral karena berkaitan dengan syariat. Oleh karena itu, diperlukan metode yang cermat, akurat, dan dapat dipertanggungjawabkan baik secara ilmiah maupun syar'i.

Metode yang digunakan dalam penentuan awal bulan adalah kombinasi antara hisab dan rukyat. Hisab digunakan untuk menghitung momen

terjadinya ijtimak (konjungsi) antara matahari dan bulan, serta memprediksi posisi hilal setelah matahari terbenam. Sedangkan rukyat dilakukan untuk melihat hilal secara langsung di lapangan. Dalam konteks modern, banyak lembaga falakiah menggunakan pendekatan hisab imkanur rukyat, yaitu hisab yang mengukur kemungkinan terlihatnya hilal dengan mempertimbangkan sejumlah parameter astronomis.

Beberapa parameter utama dalam pendekatan ini antara lain elongasi (jarak sudut antara matahari dan bulan), tinggi hilal (selisih tinggi bulan terhadap ufuk saat matahari terbenam), dan usia bulan (selang waktu antara ijtimak dan waktu pengamatan). Masing-masing parameter memiliki ambang batas tertentu yang digunakan sebagai kriteria kemungkinan rukyat. Misalnya, hilal dianggap mungkin terlihat jika memiliki elongasi minimal $6,4^\circ$, tinggi di atas 3° , dan usia lebih dari 8 jam—meskipun kriteria ini dapat sedikit berbeda antar lembaga dan negara.

Data hisab memungkinkan kita mengetahui kapan dan di mana hilal mungkin dapat dirukyat secara efektif. Dalam konteks Indonesia, data ini sangat penting karena wilayahnya yang luas menyebabkan perbedaan waktu terbenam matahari dan posisi bulan dari satu daerah ke daerah lain. Oleh karena itu, informasi dalam almanak ini diharapkan dapat membantu masyarakat, lembaga keagamaan, dan pemerintah daerah dalam melakukan rukyat yang lebih terarah dan berbasis sains.

Dengan memadukan ketepatan hisab dan pengamatan visual rukyat, proses penentuan awal bulan Hijriah menjadi lebih komprehensif. Ini sekaligus menunjukkan bahwa ilmu falak bukan sekadar warisan klasik, tetapi juga instrumen ilmiah yang terus berperan aktif dalam mengatur ritme kehidupan umat Islam hingga hari ini.

Menurut Muhammadiyah, penentuan awal bulan Hijriyah dilakukan berdasarkan kriteria hisab, bukan rukyat (pengamatan langsung). Muhammadiyah menggunakan kriteria Wujudul Hilal, secara harfiah berarti “terwujudnya hilal” atau “hilal telah ada”. Dalam konteks ilmu falak dan penanggalan Islam, ini mengacu pada eksistensi geometris hilal di atas ufuk ketika matahari terbenam, bukan pada visibilitasnya.

Muhammadiyah memilih kriteria ini karena lebih objektif, konsisten, dan mudah dihitung secara astronomis tanpa perlu menunggu hasil rukyat (pengamatan visual), yang bisa dipengaruhi cuaca, kualitas alat, dan kemampuan manusia.

Kalender Hijriah Global Tunggal

Kalender Hijriah Global Tunggal (KHGT) adalah sistem penanggalan Islam yang dirancang untuk berlaku secara serentak di seluruh dunia dengan prinsip satu hari satu tanggal bagi seluruh umat Islam tanpa perbedaan regional. Sistem ini mengintegrasikan pendekatan hisab astronomis modern dengan prinsip-prinsip syar’i dalam

penentuan awal bulan Hijriah, sehingga tidak lagi bergantung pada visibilitas hilal secara lokal, melainkan pada kriteria global yang telah disepakati. Tujuan utama dari KHGT adalah mewujudkan keseragaman waktu ibadah umat Islam dalam skala internasional, sehingga perbedaan awal bulan yang selama ini sering terjadi dapat diminimalkan.

Gagasan mengenai kalender Hijriah global sebenarnya telah berkembang sejak abad ke-20, seiring meningkatnya kesadaran akan pentingnya unifikasi kalender Islam di tengah umat yang semakin terhubung secara global. Salah satu tokoh penting dalam pengembangan wacana ini adalah Mohammad Ilyas, yang memperkenalkan konsep *International Lunar Date Line* sebagai batas penanggalan Hijriah berbasis perhitungan astronomi. Upaya ini kemudian dilanjutkan dalam berbagai forum internasional yang melibatkan para ahli falak dan ulama dari berbagai negara, termasuk melalui Organisasi Kerja Sama Islam. Salah satu tonggak penting dalam perkembangan ini adalah Konferensi Istanbul 2016 yang merekomendasikan penggunaan kalender Hijriah global berbasis kriteria imkan rukyat terpadu, meskipun implementasinya belum sepenuhnya diterapkan secara universal.

Di Indonesia, pengembangan KHGT mendapat perhatian serius dari Muhammadiyah melalui Majelis Tarjih dan Tajdid Muhammadiyah. Organisasi ini, yang sebelumnya dikenal dengan penggunaan kriteria wujudul hilal, mulai mengkaji

kemungkinan penerapan sistem kalender global sebagai bagian dari ijtihad kontemporer. Melalui berbagai forum ilmiah dan musyawarah tarjih, Muhammadiyah berupaya mengembangkan konsep kalender Hijriah yang tidak hanya akurat secara astronomis, tetapi juga mampu menjawab kebutuhan persatuan umat Islam di tingkat global. Pendekatan ini menunjukkan adanya integrasi antara kemajuan ilmu falak modern dengan pemikiran fiqh yang dinamis.

Secara konseptual, KHGT bertumpu pada prinsip kesatuan hari global, di mana seluruh umat Islam memulai tanggal Hijriah yang sama pada hari yang sama, tanpa terikat oleh batas geografis negara atau wilayah. Penentuannya didasarkan pada hisab astronomis dengan memanfaatkan data posisi Matahari dan Bulan yang sangat presisi, serta menggunakan kriteria imkan rukyat global yang menyatakan bahwa jika hilal secara astronomis memenuhi syarat visibilitas di suatu tempat di bumi, maka hal tersebut berlaku untuk seluruh dunia. Selain itu, konsep ini juga melibatkan gagasan garis tanggal Hijriah internasional yang berfungsi sebagai batas pergantian hari dalam sistem kalender Islam global, serupa dengan garis tanggal internasional dalam kalender Masehi.

Namun demikian, implementasi KHGT tidak terlepas dari berbagai tantangan yang bersifat kompleks dan multidimensional. Dari sisi fiqh, masih terdapat perbedaan pandangan di kalangan

ulama mengenai keabsahan penggunaan matla' global dibandingkan matla' lokal. Dari sisi sosial, masyarakat Muslim di berbagai negara telah lama terbiasa dengan sistem penentuan awal bulan masing-masing, sehingga perubahan menuju sistem global memerlukan proses adaptasi yang tidak singkat. Selain itu, aspek politik dan kedaulatan negara juga menjadi faktor penting, mengingat setiap negara memiliki otoritas sendiri dalam menetapkan kalender resmi. Di samping itu, tantangan teknis dan edukatif juga muncul karena belum meratanya pemahaman tentang hisab astronomis di kalangan umat Islam.

Meskipun menghadapi berbagai tantangan tersebut, KHGT tetap memiliki urgensi yang kuat untuk dikembangkan di era modern. Dengan meningkatnya mobilitas global umat Islam serta kebutuhan akan keseragaman waktu dalam pelaksanaan ibadah dan kegiatan internasional, keberadaan kalender Hijriah global menjadi semakin relevan. Secara ilmiah, perkembangan astronomi modern telah memungkinkan penentuan posisi Bulan dengan tingkat akurasi yang sangat tinggi, sehingga memberikan landasan yang kuat bagi penerapan sistem kalender berbasis hisab global. Sementara itu, dari perspektif syar'i, KHGT dapat dipahami sebagai bentuk ijtihad dalam rangka mewujudkan kemaslahatan umat dan memperkuat persatuan umat Islam secara global. Dengan demikian, KHGT bukan sekadar wacana teoritis, melainkan sebuah langkah strategis dalam

mengintegrasikan ilmu pengetahuan dan nilai-nilai keislaman dalam kehidupan umat di era kontemporer.

Prinsip, Syarat dan Parameter KHGT

Prinsip KHGT

Keselarasan hari dan tanggal di seluruh dunia. Ini berarti satu hari memiliki satu tanggal yang sama di seluruh dunia. Prinsip ini penting untuk menyatukan pelaksanaan hari-hari penting ibadah, seperti Idulfitri dan Iduladha, secara global.

Penggunaan hisab (perhitungan). Dalam penentuan awal bulan kamariah, hisab memiliki kedudukan yang sama dengan rukyat (pengamatan). Penggunaan hisab dianggap sah dan sesuai dengan sunah Nabi ﷺ, merujuk pada hadis tentang “umat yang ummi” yang kini sudah mampu berhitung dan ayat Al-Qur’an tentang perhitungan.

Hisab dipandang memberikan kepastian yang lebih tinggi dalam menentukan awal bulan, sehingga hisab didahulukan daripada rukyat. Dari sisi teknis pembuatan kalender, rukyat yang hanya dapat diketahui pada H-1 membuat penyatuan kalender menjadi mustahil, sedangkan hisab memungkinkan peramalan tanggal jauh ke depan. Penggunaan hisab dalam penentuan awal bulan ini serupa dengan penggunaan hisab dalam penentuan waktu salat.

Kesatuan matlak. Prinsip ini menganggap seluruh permukaan Bumi sebagai satu kesatuan matlak, sehingga konsep perbedaan matlak (ikhtilāf

al-maṭālī‘) tidak dipedomani dalam kalender global tunggal. Kalender zonal yang membagi Bumi menjadi zona-zona berbeda tidak memungkinkan keselarasan tanggal, sementara KHGT hanya memiliki satu zona matlak yang mencakup seluruh Bumi.

Transfer imkanu rukyat. Imkanu rukyat hilal adalah prediksi astronomis tentang kemungkinan terlihatnya hilal pada posisi geometris tertentu. Menurut prinsip ini, bulan baru tidak sah dimulai apabila belum terjadi imkanu rukyat di suatu tempat di muka bumi (khususnya di kawasan barat).

Pengadopsian prinsip ini bertujuan agar kawasan timur bumi tidak dipaksa masuk bulan baru sebelum terjadi ijtimak (konjungsi) di tempat tersebut. Transfer imkanu rukyat berarti memberlakukan hasil rukyat atau kemungkinan terlihatnya hilal di suatu tempat ke kawasan lain yang belum mengalaminya.

Dasar kebolehan ini menurut fukaha adalah keumuman hadis “... šūmū li ru’yatihi wa aftīrū li ru’yatihi ...” (berpuasalah kamu karena telah merukyat dan beridulfitrilah karena telah merukyat ...). Menurut hadis ini, seluruh umat Islam wajib berpuasa jika rukyat (atau imkanu rukyat) terjadi di mana pun di muka bumi, tanpa batasan keberlakuan rukyat tersebut, sehingga seluruh dunia dianggap satu matlak.

Permulaan hari universal. Permulaan hari dalam KHGT mengacu pada kesepakatan dunia tentang hari, yaitu waktu universal, di mana hari dimulai dan

berakhir pada tengah malam di garis bujur 180 derajat (Garis Batas Tanggal Internasional).

Hari universal dimulai pada pukul 00.00 GMT dan berlangsung selama 48 jam di seluruh dunia (untuk satu nama hari tertentu). Permulaan hari universal berikutnya tidak terjadi saat hari universal sebelumnya berakhir, melainkan di pertengahannya.

Alasan penggunaan titik tetap global (garis bujur 180° pada tengah malam GMT) sebagai permulaan hari adalah karena waktu terbenam matahari atau terbit fajar selalu berubah setiap hari dan tergantung pada lokasi.

Syarat KHGT

1. Kalender Islam harus menjadi sistem yang dapat menampung urusan agama dan dunia secara bersamaan.
2. Kalender harus didasarkan pada bulan kamariah dengan durasi tidak kurang dari 29 hari dan tidak lebih dari 30 hari, sesuai dengan siklus sinodis bulan.
3. Harus merupakan kalender unifikatif dengan ketentuan satu hari satu tanggal di seluruh dunia.
4. Tidak boleh menyebabkan sekelompok Muslim di suatu kawasan memasuki bulan baru sebelum terjadinya ijtimak (konjungsi geosentrik antara matahari dan bulan).
5. Tidak boleh menyebabkan sekelompok Muslim memulai bulan baru sebelum yakin terjadinya imkanu rukyat hilal di suatu tempat di muka bumi.

6. Tidak boleh menahan sekelompok Muslim di suatu kawasan untuk memasuki bulan baru sementara hilal telah terlihat jelas di ufuk mereka.

Parameter (Kriteria) KHGT

1. Seluruh kawasan dunia dianggap sebagai satu kesatuan matlak. Bulan baru dimulai secara bersamaan di seluruh kawasan.
2. Bulan baru dimulai apabila di bagian mana pun di dunia, sebelum pukul 24.00 UT, telah terpenuhi kriteria: elongasi 8 derajat atau lebih, dan ketinggian hilal di atas ufuk saat matahari terbenam minimal 5 derajat atau lebih (elongasi dan ketinggian hilal geosentris).
3. Kriteria imkanu ruyat yang digunakan adalah: elongasi 8° atau lebih DAN ketinggian hilal di atas ufuk saat matahari terbenam minimal 5° . Kriteria ini merujuk pada kriteria imkanu ruyat Turki 2016.
4. Apabila kriteria di atas terpenuhi setelah lewat tengah malam pukul 24.00 UT, maka bulan baru tetap dimulai dengan ketentuan berikut:
 - a. Apabila parameter di atas telah terpenuhi di suatu tempat mana pun di dunia dan ijtimak di Selandia Baru terjadi sebelum fajar.
 - b. Parameter di atas pada butir 1 terjadi di wilayah daratan Benua Amerika.

Peluang implementasi KHGT dianggap sangat mungkin, terutama di kalangan Muslim di Amerika dan Eropa yang merasa sangat membutuhkan

kalender seperti ini. Muhammadiyah mengusulkan pengesahan KHGT melalui Musyawarah Nasional (Munas) Tarjih untuk dijadikan pedoman resmi dalam menyusun kalender.

Contoh Praktis:

Ijtimak:

19 Maret 2026 pukul 01.23 UTC (08.23 WIB)

Imkan Rukyat Dunia :

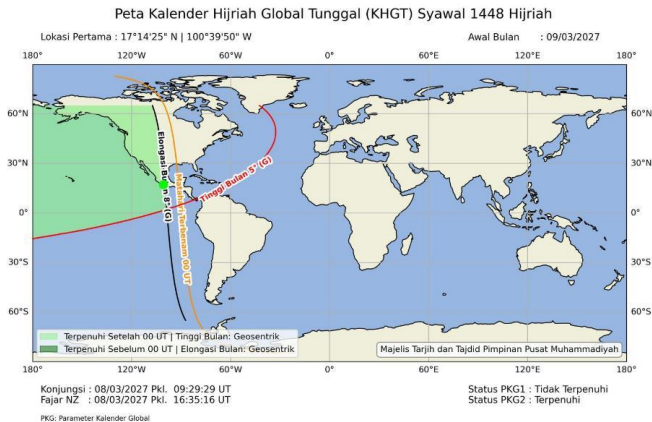

19 Maret 2026 pukul 15.23 UTC

Tinggi Hilal: $07^{\circ} 03' 22''$

Elongasi Hilal: $08^{\circ} 00' 00''$

Awal Syawal 1447H : Jumat, 20 Maret 2026 M

Maka keesokan harinya adalah 1 Syawal 1447 H menurut Muhammadiyah.

KHGT merupakan kelanjutan dari tajdid dengan ijtihad penggunaan hisab hakiki dalam Muhammadiyah yang telah berlangsung lama.

4. Gerhana

Gerhana adalah fenomena langit yang terjadi akibat konfigurasi segaris tiga benda langit utama: Matahari, Bulan, dan Bumi. Dalam ilmu falak, gerhana dibagi menjadi dua jenis utama, yaitu gerhana Matahari (kusuf) dan gerhana Bulan (khusuf). Gerhana Matahari terjadi ketika Bulan berada di antara Bumi dan Matahari, sehingga cahaya Matahari tertutupi oleh Bulan baik sebagian maupun seluruhnya. Peristiwa ini hanya bisa terjadi pada saat ijtima' (konjungsi) atau bulan baru, di mana posisi bujur ekliptika Matahari dan Bulan

hampir identik. Sebaliknya, gerhana Bulan terjadi ketika Bumi berada di antara Matahari dan Bulan, dan bayangan Bumi jatuh ke permukaan Bulan. Ini hanya terjadi saat bulan purnama (oposisi), yaitu ketika Bulan berada pada posisi yang berseberangan dengan Matahari dalam sudut bujur langit.

Penentuan waktu dan kemungkinan terjadinya gerhana dilakukan melalui hisab hakiki geosentrik, yaitu perhitungan posisi benda langit berdasarkan pusat Bumi. Dalam perhitungan ini, gerhana Matahari diperkirakan dari waktu konjungsi dan kriteria keterjadian saat Bulan menutupi piringan Matahari dari sudut pandang Bumi. Sementara itu, gerhana Bulan dihitung dari saat Bulan memasuki bayangan Bumi. Hisab ini akan menghasilkan waktu-waktu penting seperti awal dan akhir gerhana, serta puncaknya (greatest eclipse). Perhitungan ini dapat dilengkapi dengan pendekatan toposentris untuk menentukan visibilitas dari suatu lokasi tertentu di permukaan Bumi, dengan mempertimbangkan koreksi paralaks, refraksi atmosfer, dan waktu lokal.

Jenis gerhana ditentukan oleh geometri bayangan. Pada gerhana Matahari, terdapat empat jenis utama: gerhana total, di mana seluruh piringan Matahari tertutupi oleh Bulan; gerhana sebagian, jika hanya sebagian piringan Matahari tertutup; gerhana cincin (annular), ketika Bulan berada di jarak yang lebih jauh (apogee) sehingga tidak cukup besar untuk menutup penuh Matahari, meninggalkan cincin cahaya di sekelilingnya; serta gerhana hibrida, yaitu kombinasi antara gerhana total dan cincin, tergantung lokasi pengamat. Sedangkan pada gerhana Bulan, terdapat gerhana penumbra, saat Bulan hanya melewati bayangan luar Bumi (penumbra); gerhana sebagian, bila hanya sebagian piringan Bulan masuk ke dalam umbra (bayangan inti Bumi); dan gerhana total, jika seluruh Bulan masuk ke dalam umbra, menyebabkan warna merah tembaga yang dikenal sebagai "Blood Moon".

Fase-fase gerhana secara astronomis terdiri dari tujuh titik penting, terutama pada gerhana Bulan. Gerhana dimulai dengan kontak penumbra awal (P1), diikuti oleh kontak umbra awal (U1), lalu awal totalitas (U2) ketika seluruh Bulan berada dalam umbra. Puncak gerhana terjadi di tengah interval ini, lalu diikuti oleh akhir totalitas (U3), akhir umbra (U4), dan terakhir akhir penumbra (P4). Pada gerhana Matahari, fase-fase yang diamati tergantung jenisnya, dan pada gerhana total, fase utama meliputi kontak pertama (kontak sebagian), kontak total, puncak gerhana, akhir total, dan kontak terakhir.

Gerhana tidak dapat diamati dari seluruh wilayah Bumi secara seragam. Visibilitasnya bergantung pada posisi geografis pengamat serta waktu gerhana. Gerhana Matahari hanya terlihat dari wilayah-wilayah tertentu yang dilalui oleh bayangan Bulan, sementara gerhana Bulan bisa diamati dari semua tempat di Bumi yang sedang mengalami malam saat peristiwa terjadi. Dalam konteks visibilitas lokal, pendekatan toposentris digunakan untuk menghitung waktu terbit dan terbenamnya Bulan dan Matahari, serta kemungkinan pengamatan visual berdasarkan elevasi dan cuaca.

Dalam Islam, gerhana merupakan salah satu tanda kebesaran Allah SWT. Rasulullah SAW bersabda: "Sesungguhnya Matahari dan Bulan adalah dua tanda dari tanda-tanda kebesaran Allah. Keduanya tidak mengalami gerhana karena kematian seseorang atau karena hidupnya seseorang. Maka apabila kalian melihat gerhana, berdoalah kepada Allah, bertakbirlah, shalatlah, dan bersedekahlah." (HR. Bukhari dan Muslim). Oleh karena itu, ketika terjadi gerhana, umat Islam dianjurkan untuk melaksanakan shalat gerhana (shalat kusuf atau khusuf), sebagai bentuk tadabbur terhadap keagungan ciptaan Allah yang termanifestasi dalam dinamika alam semesta.

Bab 2. Peran Hisab dan Rukyat dalam Penentuan awal Bulan

Penentuan awal bulan Hijriah merupakan hal yang sangat penting dalam kehidupan umat Islam, karena berkaitan langsung dengan waktu pelaksanaan ibadah-ibadah pokok seperti puasa Ramadhan, Idul Fitri, Idul Adha, dan pelaksanaan haji. Dalam menentukan awal bulan ini, dua metode utama yang telah digunakan sejak dahulu kala adalah hisab (perhitungan astronomi) dan rukyat (pengamatan langsung terhadap hilal).

Hisab berperan sebagai metode ilmiah yang memanfaatkan data astronomi dan rumus matematis untuk menghitung posisi bulan dan matahari dengan sangat presisi. Melalui hisab, para ahli falak dapat mengetahui kapan terjadinya ijtimak (konjungsi), serta memperkirakan posisi bulan setelah matahari terbenam—apakah sudah berada di atas ufuk atau belum, dan seberapa besar kemungkinan hilal terlihat. Hisab memungkinkan kita untuk membuat prediksi yang dapat dirujuk oleh berbagai pihak jauh sebelum waktu rukyat dilakukan.

Sementara itu, rukyat merupakan metode konfirmasi dengan cara mengamati langsung hilal di langit barat saat matahari terbenam. Jika hilal berhasil dilihat, maka malam itu ditetapkan sebagai awal bulan baru. Rukyat memiliki akar tradisi yang kuat dalam Islam, karena dilakukan langsung oleh Nabi Muhammad SAW dan para sahabatnya. Namun, di era modern, rukyat tidak hanya mengandalkan mata telanjang, tetapi juga dibantu dengan alat optik seperti teleskop dan kamera digital, sehingga hasilnya bisa lebih terverifikasi.

Dalam praktik kontemporer, kedua metode ini tidak lagi dipertentangkan, melainkan saling melengkapi. Hisab berfungsi sebagai pemandu dan pemetaan kemungkinan rukyat, sedangkan rukyat menjadi bentuk validasi lapangan. Inilah yang dikenal dengan pendekatan hisab imkanur rukyat, yaitu hisab yang memperkirakan kemungkinan terlihatnya hilal dengan parameter-parameter tertentu, sehingga pengamatan dapat dilakukan secara lebih efektif dan terarah. Pendekatan ini juga menjadi jembatan ilmiah dalam mencari titik temu antara berbagai pandangan yang ada di kalangan umat Islam.

Peran integratif antara hisab dan rukyat ini semakin penting dalam konteks Indonesia yang luas secara geografis dan majemuk dalam pandangan keagamaan. Oleh karena itu, upaya penyusunan data hilal dalam almanak ini bertujuan untuk

memberikan informasi akurat dan aplikatif kepada masyarakat, lembaga keagamaan, serta pihak berwenang, sehingga penentuan awal bulan Hijriah dapat dilaksanakan secara ilmiah, profesional, dan tetap berlandaskan syariat.

A. Hisab dan Kalender Islam

Kalender Islam, yang dikenal juga sebagai kalender Hijriah, merupakan sistem penanggalan yang berbasis pada peredaran bulan mengelilingi bumi (kalender lunar). Tidak seperti kalender Masehi yang berbasis matahari, kalender Hijriah terdiri dari 12 bulan kamariah dengan panjang bulan antara 29 atau 30 hari, tergantung pada penampakan hilal setiap bulannya. Sistem ini telah digunakan sejak masa Khalifah Umar bin Khattab dan menjadi rujukan utama umat Islam dalam menentukan waktu-waktu ibadah, hari besar keagamaan, serta berbagai kegiatan keislaman lainnya.

Agar kalender Hijriah dapat digunakan secara konsisten dan terencana, dibutuhkan hisab atau perhitungan astronomi. Hisab memungkinkan kita mengetahui kapan terjadinya ijtimak (konjungsi), tinggi bulan saat maghrib, dan kemungkinan visibilitas hilal untuk setiap awal bulan. Dengan metode hisab yang semakin canggih, kini para ahli falak dapat menyusun kalender Hijriah tahunan dengan akurasi tinggi, sehingga masyarakat memiliki pedoman yang jelas dan dapat diandalkan dalam merencanakan aktivitas keagamaan.

Namun, penyusunan kalender Hijriah juga memiliki tantangan tersendiri. Karena visibilitas hilal bisa berbeda antarwilayah, dan karena adanya perbedaan metode serta kriteria yang digunakan oleh masing-masing negara atau organisasi, maka sering terjadi perbedaan awal bulan Hijriah, terutama untuk bulan-bulan penting seperti Ramadhan dan Zulhijjah. Dalam konteks ini, hisab menjadi alat bantu penting untuk memetakan kemungkinan terlihatnya hilal di berbagai lokasi, sehingga perbedaan tersebut dapat dipahami secara ilmiah dan tidak menimbulkan kebingungan di tengah masyarakat.

Di Indonesia, kalender Hijriah yang digunakan secara resmi oleh pemerintah mengacu pada hisab dengan pendekatan imkanur rukyat, yaitu hisab yang mempertimbangkan kemungkinan terlihatnya hilal berdasarkan kriteria tertentu (seperti tinggi minimal hilal 3° dan elongasi minimal $6,4^\circ$). Sementara itu, beberapa organisasi masyarakat atau lembaga keagamaan mungkin menggunakan kriteria yang berbeda, baik yang lebih longgar maupun lebih ketat. Di sinilah pentingnya edukasi kepada masyarakat bahwa kalender Islam adalah produk ijtihad ilmiah yang bersifat dinamis.

Almanak OIF UMSU hadir sebagai bagian dari upaya memperkenalkan kalender Hijriah berbasis hisab kepada masyarakat Sumatera Utara dan sekitarnya. Dengan menyajikan data hisab secara rinci, termasuk waktu ijtimak, posisi hilal, dan kriteria visibilitasnya, almanak ini diharapkan dapat membantu berbagai kalangan dalam memahami dan

mengaplikasikan kalender Islam secara lebih ilmiah, akurat, dan bijaksana.

B. Penentuan Awal Bulan

Penentuan awal bulan Hijriah bukan sekadar persoalan teknis dalam penanggalan, melainkan bagian penting dari kehidupan keagamaan umat Islam. Banyak ibadah yang ditentukan waktunya berdasarkan awal bulan, seperti puasa Ramadhan, salat Tarawih, puasa Arafah, Idul Fitri, dan Idul Adha. Oleh karena itu, proses penentuan awal bulan harus dilakukan dengan penuh kehati-hatian, berdasar pada metode yang dapat dipertanggungjawabkan secara syar'i dan ilmiah.

Secara umum, awal bulan Hijriah ditetapkan dengan dua pendekatan utama: rukyat dan hisab. Rukyat adalah pengamatan hilal secara langsung di ufuk barat setelah matahari terbenam pada tanggal 29 bulan Hijriah. Jika hilal terlihat, maka malam itu ditetapkan sebagai awal bulan baru. Jika tidak terlihat, bulan digenapkan menjadi 30 hari. Metode ini mengikuti praktik Nabi Muhammad SAW dan para sahabat, sehingga memiliki legitimasi keagamaan yang kuat. Namun dalam praktiknya, rukyat bisa dipengaruhi oleh cuaca, kondisi atmosfer, dan faktor teknis lainnya.

Di sisi lain, hisab menawarkan pendekatan rasional dan prediktif melalui perhitungan astronomi terhadap posisi bulan dan matahari. Dengan bantuan teknologi, kita dapat mengetahui kapan ijtimak terjadi, berapa tinggi hilal setelah

matahari terbenam, berapa besar elongasi, dan apakah hilal secara teoritis mungkin untuk dilihat. Pendekatan ini tidak menggugurkan peran rukyat, melainkan memperkuatnya. Bahkan dalam banyak kasus, hisab digunakan untuk memandu pelaksanaan rukyat agar lebih efisien dan akurat.

Di Indonesia, penentuan awal bulan oleh pemerintah dilakukan melalui sidang isbat yang melibatkan berbagai unsur: pakar hisab rukyat, perwakilan ormas Islam, astronom, dan ahli teknologi optik. Pemerintah menggunakan pendekatan hisab imkanur rukyat, yaitu hisab yang mempertimbangkan kemungkinan terlihatnya hilal dengan ambang batas tertentu. Jika hisab menunjukkan hilal memungkinkan untuk dilihat dan rukyat berhasil dilakukan, maka awal bulan ditetapkan. Jika tidak terlihat, maka bulan digenapkan menjadi 30 hari.

Meskipun terkadang terjadi perbedaan dalam penetapan awal bulan di antara ormas atau negara, perbedaan ini merupakan konsekuensi dari variasi metode dan kriteria yang digunakan. Yang terpenting adalah semangat untuk terus meningkatkan kualitas hisab, akurasi rukyat, dan kesadaran masyarakat akan pentingnya ilmu falak sebagai alat bantu dalam menjalankan ibadah secara tepat waktu dan berdasarkan ilmu yang benar. Almanak ini disusun sebagai bagian dari upaya untuk memberikan informasi yang akurat dan bermanfaat dalam proses penentuan awal bulan.

Bab 3. Konjungsi & Data Hilal

Penetapan awal bulan Hijriah merupakan hal yang sangat penting dalam kehidupan umat Islam. Kalender Hijriah, yang berbasis pada peredaran bulan mengelilingi bumi, digunakan untuk menentukan waktu pelaksanaan ibadah-ibadah utama seperti puasa Ramadan, Idulfitri, Iduladha, serta pelaksanaan haji. Dalam proses penentuan awal bulan tersebut, dua metode utama yang digunakan oleh para ulama dan ahli falak adalah rukyat (pengamatan langsung terhadap hilal) dan hisab (perhitungan astronomis). Keduanya bertujuan untuk menentukan kapan bulan baru dimulai, yakni saat hilal—bulan sabit tipis yang muncul setelah konjungsi—mungkin terlihat di ufuk barat setelah matahari terbenam.

Secara astronomis, awal bulan qamariyah tidak dimulai tepat saat terjadi konjungsi (ijtima'), melainkan saat munculnya hilal, yakni fase bulan yang pertama kali dapat terlihat setelah konjungsi. Konjungsi adalah momen ketika posisi bujur ekliptika Matahari dan Bulan sama atau sangat dekat, yang berarti keduanya berada dalam satu garis bujur langit, sehingga dari perspektif Bumi, Bulan berada di antara Bumi dan Matahari. Dalam istilah ilmiah, ini dikenal sebagai new moon atau bulan mati, karena Bulan belum mendapatkan cukup cahaya pantulan untuk bisa terlihat dari

Bumi. Setelah konjungsi terjadi, Bulan mulai bergerak menjauhi Matahari, dan jika kondisi langit memungkinkan serta kriteria tertentu terpenuhi, hilal dapat terlihat di ufuk barat saat Matahari terbenam.

Dalam Al-Qur'an, Allah SWT menegaskan pentingnya hilal sebagai penanda waktu bagi umat manusia:

يَسْأَلُونَكَ عَنِ الْأَهْلِ قُلْ هِيَ مَوَاقِيْتُ لِلنَّاسِ وَالْحَجِّ وَالْبُرِّ بِأَنْ تَأْتُوا
النُّبُوتَ مِنْ ظُهُورِهَا وَلَكِنَّ الْبُرَّ مِنَ اتَّقَى وَأْتُوا النُّبُوتَ مِنْ أَوْبَائِهَا وَأَنْقُوا
اللَّهُ لَعَلَّكُمْ تَفْخُونَ

"Mereka bertanya kepadamu tentang bulan sabit. Katakanlah: Bulan sabit itu adalah tanda-tanda waktu bagi manusia dan (bagi ibadah) haji..." (QS. Al-Baqarah: 189)

Ayat ini menunjukkan bahwa bulan sabit yang dalam istilah falak dikenal sebagai hilal adalah indikator awal bulan dalam sistem kalender Islam. Tidak hanya sebagai sistem penanggalan, tetapi juga menjadi dasar waktu-waktu penting dalam ibadah. Rasulullah SAW pun bersabda:

"Berpuasalah kamu karena melihat hilal dan berbukalah kamu karena melihat hilal. Jika hilal tertutup bagi kalian, maka sempurnakanlah hitungan bulan menjadi tiga puluh hari." (HR. Bukhari dan Muslim)

Hadis ini menunjukkan bahwa rukyat merupakan metode utama dalam penentuan awal

bulan Hijriah, namun dalam kondisi tertentu, metode hisab dapat digunakan sebagai alat bantu yang sangat berguna. Dalam konteks keilmuan modern, hisab digunakan untuk memprediksi kemungkinan terlihatnya hilal dengan menggunakan data-data astronomis seperti waktu konjungsi, tinggi hilal, umur hilal, elongasi (jarak sudut antara Bulan dan Matahari), dan posisi azimut saat Matahari terbenam.

Dalam bab ini, disajikan data lengkap dan sistematis mengenai waktu konjungsi dan data hilal untuk bulan Muharram hingga Zulhijjah tahun 1445–1447 H, yang disusun berdasarkan perhitungan hisab hakiki kontemporer. Dua lokasi utama atau markas yang digunakan sebagai titik referensi perhitungan dalam studi ini adalah:

1. Observatorium Ilmu Falak UMSU (OIF UMSU) di Kota Medan, dengan koordinat geografis $03^{\circ} 34' 44''$ LU & $98^{\circ} 43' 17''$ BT, dan
2. Barus, Tapanuli Tengah, dengan koordinat $02^{\circ} 00' 53''$ LU & $98^{\circ} 24' 27''$ BT.

Pemilihan kedua lokasi ini tidak hanya karena nilai strategis geografisnya di wilayah barat Indonesia (WIB), tetapi juga didasarkan pada latar belakang penelitian dan pengamatan hilal yang rutin dilakukan oleh OIF UMSU. Perbedaan lintang dan bujur dari kedua lokasi memungkinkan kajian perbandingan antara kondisi hilal dari titik yang

relatif lebih utara dan lebih selatan, serta antara daerah dataran rendah (Medan) dan kawasan pesisir yang lebih terbuka (Barus).

Data yang disajikan dalam bab ini mencakup:

1. Waktu konjungsi dalam waktu lokal WIB,
2. Waktu Matahari Terbenam
3. Waktu Hilal Terbenam
4. Tinggi hilal saat Matahari terbenam,
5. Sudut azimut Bulan, dan
6. Keterlihatan Hilal

Dengan mempertimbangkan parameter-parameter tersebut, analisis visibilitas hilal dapat dilakukan sesuai Parameter KHGT. Tujuan utama penyusunan bab ini adalah memberikan data hisab yang terverifikasi dan dapat dijadikan acuan dalam pengambilan keputusan falakiah, khususnya dalam penentuan awal bulan Hijriah baik oleh institusi resmi, para praktisi rukyat, maupun kalangan akademik. Dengan mengintegrasikan metode hisab dan dukungan observasi langsung, diharapkan keakuratan penentuan awal bulan dapat terus meningkat, sejalan dengan semangat syariat dan kemajuan ilmu pengetahuan.

Bab 4. Waktu Shalat Tahun 2026

Waktu shalat adalah bagian paling fundamental dalam praktik ibadah umat Islam. Ia tidak hanya bersifat ritual, tetapi juga memiliki dimensi waktu yang sangat presisi, sehingga memerlukan penentuan yang cermat berdasarkan posisi benda-benda langit, khususnya Matahari. Lima waktu shalat dalam sehari ditentukan oleh dinamika pergerakan Matahari di langit yang dapat diamati dan dihitung secara astronomis, menjadikan ilmu falak (astronomi Islam) sebagai pilar penting dalam penetapan waktu-waktu ibadah ini.

Allah SWT berfirman dalam Al-Qur'an:

أَقِمِ الصَّلَاةَ لِذِكْرِ الشَّمْسِ إِلَى غَسَقِ اللَّيْلِ وَقُرْآنَ الْفَجْرِ إِنَّ
قُرْآنَ الْفَجْرِ كَانَ مَشْهُودًا

"Dirikanlah shalat dari sesudah matahari tergelincir sampai gelap malam dan (dirikanlah pula shalat) subuh. Sesungguhnya shalat subuh itu disaksikan (oleh malaikat)." (QS. Al-Isra': 78)

Ayat ini menjelaskan rentang waktu-waktu shalat yang berkaitan erat dengan posisi Matahari di langit, mulai dari zawal (matahari tergelincir) untuk shalat Zuhur, hingga terbit fajar untuk shalat Subuh. Bahkan dalam hadits Nabi SAW disebutkan pula

pembagian waktu-waktu shalat secara rinci sesuai dengan pergerakan harian Matahari:

“Waktu Zuhur adalah apabila matahari telah tergelincir hingga bayangan seseorang sama panjang dengan tingginya, selama belum masuk waktu Ashar. Waktu Ashar adalah selama matahari belum menguning. Waktu Maghrib adalah selama mega merah belum menghilang. Waktu Isya adalah hingga tengah malam. Waktu Subuh adalah dari terbitnya fajar hingga sebelum terbitnya matahari...” (HR. Muslim)

Dalam konteks falak, penentuan waktu shalat dilakukan dengan menggunakan parameter-parameter astronomis seperti **tinggi matahari (altitude)**, **deklinasi**, **azimut**, serta **sudut depresi matahari di bawah ufuk** untuk waktu Subuh dan Isya. Data ini diperoleh melalui hisab falakiyah berdasarkan perhitungan posisi Matahari terhadap lokasi pengamat. Oleh karena itu, penentuan waktu shalat tidak bersifat statis, melainkan berubah setiap hari dan bergantung pada lokasi geografis.

Waktu-waktu shalat yang disusun meliputi:

- **Shalat Subuh:** saat Matahari berada sekitar -18° di bawah ufuk (mengikuti pendekatan MABIMS dan observasi lokal),
- **Shalat Zuhur:** dimulai sejak Matahari melintasi meridian langit (zawal),

- **Shalat Ashar:** ketika panjang bayangan benda melebihi satu atau dua kali tinggi benda (mengacu pada madzhab yang digunakan),
- **Shalat Maghrib:** dimulai tepat setelah Matahari terbenam (altitude 0°),
- **Shalat Isya:** saat cahaya merah (syafaq) menghilang dari ufuk, biasanya saat Matahari berada sekitar -18° di bawah ufuk barat.

Tujuan utama penyusunan waktu shalat ini adalah sebagai acuan yang akurat dan konsisten bagi umat Islam dalam melaksanakan kewajiban ibadah harian, khususnya di wilayah Sumatera Utara dan sekitarnya. Diharapkan penyajian ini menjadi rujukan ilmiah sekaligus praktis bagi kalangan akademik, masjid, lembaga keagamaan, dan masyarakat umum dalam memahami dan menepati waktu shalat dengan tepat berdasarkan perhitungan falak yang sahih dan terstandarisasi.

1. Kriteria Waktu Subuh Menggunakan Dip Matahari pada -18° atau penambahan waktu 8 menit.
2. Jadwal ini berlaku untuk wilayah Toba dan sekitarnya mencakup: Balige, Tampahan, Laguboti, Habinsaran, Borbor, Nassau, Silaen, Sigumpar, Porsea, Pintu Pohan Meranti, Siantar Narumonda, Parmaksian, Lumban Julu, Ajibata, Uluan, dan Ronggur Nihuta.

Fenomena Astronomi 2026

Fenomena Astronomi 2026

Jan 01	Bulan Pada Perigee: 360348 km
03	Bulan Purnama
03	Bumi pada Perihelion: 0.98330 AU
03	Quadrantid Meteor Shower
03	Jupiter 3.7°S dari Bulan
03	Pollux 3.0°U dari Bulan
06	Merkurius pada Aphelion
06	Venus pada Konjungsi Superior
06	Regulus 0.5°S dari Bulan
07	Bulan pada Descending Node
09	Mars berkonjungsi dengan Matahari
10	Jupiter Pada Oposisi
10	Bulan Kuartar Akhir
10	Spica 1.6°U dari Bulan
13	Bulan pada Apogee: 405437 km
14	Antares 0.6°U dari Bulan
18	Bulan Baru
19	Obs Hilal Nasional
21	Merkurius pada Konjungsi Superior
21	Bulan pada Ascending Node
22	Venus pada Aphelion
23	Saturnus 4.3°S dari Bulan

25	Bulan Kuartar Awal
27	Pleiades 1.1°S dari Bulan
29	Bulan Pada Perigee: 365878 km
30	Jupiter 3.8°S dari Bulan
31	Pollux 3.0°U dari Bulan
Feb 01	Bulan Purnama
02	Regulus 0.4°S dari Bulan
03	Bulan pada Descending Node
07	Spica 1.8°U dari Bulan
09	Bulan Kuartar Akhir
10	Bulan pada Apogee: 404577 km
10	Antares 0.7°U dari Bulan
17	Bulan Baru
17	Gerhana Matahari Total, mag=0.963
	Obs Hilal Nasional
18	Bulan pada Ascending Node
18	Merkurius 0.1°U dari Bulan: Occn.
19	Merkurius pada Perihelion
19	Merkurius pada Elongasi Besar: 18.1°E
19	Saturnus 4.6°S dari Bulan
23	Pleiades 1.2°S dari Bulan
24	Bulan Kuartar Awal
24	Bulan Pada Perigee: 370132 km
27	Jupiter 4.0°S dari Bulan
27	Pollux 3.0°U dari Bulan

Mar 02	Regulus 0.4°S dari Bulan
02	Bulan pada Descending Node
03	Total Lunar Eclipse, mag=1.151
03	Bulan Purnama
06	Spica 1.8°U dari Bulan
07	Merkurius at Inferior Conjunction
10	Antares 0.7°U dari Bulan
10	Bulan pada Apogee: 404385 km
11	Bulan Kuartar Akhir
15	Merkurius 3.4°U of Mars
17	Merkurius 2.0°U dari Bulan
17	Bulan pada Ascending Node
17	Mars 1.5°S dari Bulan
18	Bulan Baru
19	Obs Hilal Nasional
20	Venus 4.6°S dari Bulan
20	Vernal Equinox
22	Neptune berkonjungsi dengan Matahari
22	Bulan Pada Perigee: 366858 km
23	Pleiades 1.1°S dari Bulan
25	Saturnus berkonjungsi dengan Matahari
25	Bulan Kuartar Awal
26	Mars at Perihelion: 1.38126 AU
26	Jupiter 3.9°S dari Bulan
26	Pollux 3.0°U dari Bulan
29	Regulus 0.4°S dari Bulan

30	Bulan pada Descending Node
Apr 01	Bulan Purnama
02	Spica 1.8°U dari Bulan
03	Merkurius pada Elongasi Besar: 27.8°B
06	Antares 0.6°U dari Bulan
07	Bulan pada Apogee: 404974 km
09	Bulan Kuartar Akhir
13	Bulan pada Ascending Node
15	Mars 3.7°S dari Bulan
17	Bulan Baru
	Obs Hilal Nasional
19	Bulan Pada Perigee: 361631 km
19	Venus 4.8°S dari Bulan
19	Pleiades 1.0°S dari Bulan
19	Mars 1.2°U of Saturnus
20	Merkurius 0.5°S of Saturnus
20	Merkurius 1.7°S of Mars
22	Lyrid Meteor Shower
22	Jupiter 3.6°S dari Bulan
23	Pollux 3.2°U dari Bulan
23	Bulan Kuartar Awal
23	Venus 3.4°S of Pleiades
25	Regulus 0.2°S dari Bulan
26	Bulan pada Descending Node
	Okultasi Asteroid

30	Spica 1.8°U dari Bulan
May 01	Bulan Purnama
03	Antares 0.5°U dari Bulan
04	Bulan pada Apogee: 405843 km
05	Eta-Aquarid Meteor Shower
09	Bulan Kuartar Akhir
10	Bulan pada Ascending Node
14	Merkurius pada Konjungsi Superior
14	Venus pada Perihelion
16	Bulan Baru
